Searcy,Stephen Nowicki,2010-01-01 Gull chicks beg for food from their parents Peacocks spread their tails to attract potential mates Meerkats alert family members of the approach of predators But are these and other animals sometimes dishonest That s what William Searcy and Stephen Nowicki ask in The Evolution of Animal Communication They take on the fascinating yet perplexing question of the dependability of animal signaling systems The book probes such phenomena as the begging of nesting birds alarm calls in squirrels and primates carotenoid coloration in fish and birds the calls of frogs and toads and weapon displays in crustaceans Do these signals convey accurate information about the signaler its future behavior or its environment Or do they mislead receivers in a way that benefits the signaler For example is the begging chick really hungry as its cries indicate or is it lobbying to get more food than its brothers and sisters Searcy and Nowicki take on these and other questions by developing clear definitions of key issues by reviewing the most relevant empirical data and game theory models available and by asking how well theory matches data They find that animal communication is largely reliable but that this basic reliability also allows the clever deceiver to flourish Well researched and clearly written their book provides new insight into animal communication behavior and evolution **Antimicrobials in Animal Husbandry** Arti Gupta,Ram Prasad,2025-08-04 Using antibiotics to promote growth increase feed efficiency and reduce mortality in indoor poultry farming is unsustainable and has been implicated in increased antibiotic resistance in humans The use of antibiotics in food producing animals is recognized as favoring the development of antibiotic resistance and the ongoing emergence of antibiotic resistant bacteria is a public health issue of increasing concern The concern is that current life saving antibiotics are becoming less effective The requirement is for more
