

## Lab: Observing Plant Cells (Onions)

### Background Information:

One of the first scientists to look at cells under a microscope was an English scientist by the name of **Robert Hooke**. He viewed and described the appearance of cork under the microscope and decided to name the tiny box-like structures that he observed "cells" because they looked like the small chambers where monks lived.

By the early part of the 19<sup>th</sup> century, it was accepted that all living things are composed of cells. Cells come in a variety of shapes and sizes, and cells perform different functions. Although cells may appear outwardly different, they resemble each other because they share common structures.

### Materials:

- Onion piece (epidermal tissue)
- Microscope
- Plastic slide (2)
- Coverslip (2)
- Eosin Y solution

### Onion Cell Procedure:

1. Set up your microscope.
2. Get a clean slide. Take a piece of the onion-skin cell (epidermal tissue). Place the layer of tissue on a slide and then add a small drop of iodine to the slide. Place a coverslip on the slide, slowly lowering it over the sample to avoid creating air bubbles.
3. Place the slide on the stage and view the slide under the scanning low power (4x). Then, switch to high power (10x).
4. Draw one or two onion cells in detail on the highest power on the attached page. Label the following: **cytoplasm**, **cell wall**, and **nucleus**. When drawing objects as seen under a microscope, it is important to:
  - a. Draw clearly; make distinct lines
  - b. Only use pencil
  - c. Provide the name of the cellular organelles
5. Carefully rinse the slide and coverslip in the sink and leave both to dry on the paper towel.

**IMPORTANT NOTE**

Eosin Y, Iodine and Methylene blue are stains  
 Be careful not to get any on your clothes!  
 Will need 2 slides:  
 1) Onion with Eosin Y  
 2) Onion with NO Eosin Y
