ICEL 2017 - Proceedings of the 12th International Conference on e-Learning Laurie O. Campbell, Richard Hartshorn, 2017 *Drinking Water Quality and Human Health* Patrick Levallois, Cristina Villanueva Belmonte, 2019-04-04

The quality of drinking water is paramount for public health. Despite important improvements in the last decades, access to safe drinking water is not universal. The World Health Organization estimates that almost 10% of the population in the world do not have access to improved drinking water sources. Among other diseases, waterborne infections cause diarrhea, which kills nearly one million people every year, mostly children under 5 years of age. On the other hand, chemical pollution is a concern in high income countries and an increasing problem in low and middle income countries. Exposure to chemicals in drinking water may lead to a range of chronic non-communicable diseases, e.g. cancer, cardiovascular disease, adverse reproductive outcomes, and effects on children's health, e.g. neurodevelopment, among other health effects. Although drinking water quality is regulated and monitored in many countries, increasing knowledge leads to the need for reviewing standards and guidelines on a nearly permanent basis, both for regulated and newly identified contaminants. Drinking water standards are mostly based on animal toxicity data, and more robust epidemiologic studies with accurate exposure assessment are needed. The current risk assessment paradigm, dealing mostly with one by one chemicals, dismisses the potential synergisms or interactions from exposures to mixtures of contaminants, particularly at the low exposure range. Thus, evidence is needed on exposure and health effects of mixtures of contaminants in drinking water. Finally, water stress and water quality problems are expected to increase in the coming years due to climate change and increasing water demand by population growth, and new evidence is needed to design appropriate adaptation policies. This Special Issue of *International Journal of Environmental Research and Public Health* (IJERPH) focuses on the current state of knowledge on the links between drinking water quality and human health.

Research Universities in Africa Cloete, Nico, Bunting, Ian, 2018-11-09. From the early 2000s, a new discourse emerged in Africa and the international donor community that higher education was important for development in Africa. Within this zeitgeist of converging interests, a range of agencies agreed that a different collaborative approach to linking higher education to development was necessary. This led to the establishment of the Higher Education Research and Advocacy Network in Africa (Herana) to concentrate on research and advocacy about the possible role and contribution of universities to development in Africa. This book is the final publication to emerge from the Herana project. The project has also published more than 100 articles, chapters, reports, manuals, and datasets, and many presentations have been delivered to share insights gained from the work done by Herana. Given its prolific dissemination, it seems reasonable to ask whether this fourth and final publication will offer the reader anything new. This book is certainly different from previous publications in several respects. First, it is the only book to include an analysis of eight African universities based on the full 15 years of empirical data collected by the project. Second, previous books and reports were published mid-project. This book has

benefited from an extended gestation period allowing the authors and contributors to reflect on the project without the distractions associated with managing and participating in a large scale project For the first time some of those who have been involved in Herana since its inception have had the opportunity to at least make an attempt to see part of the wood for the trees Different does not necessarily mean new An emphasis on the newness of the data and perspectives presented in this book is important because it shows that it is more than a historical record of a donor funded project Rather each chapter in this book brings to a lesser or greater extent something new to our understanding of universities research and development in Africa

The Urban Ecologies of Divided Cities Amira Osman, John Nagle, Sabyasachi Tripathi, 2023-06-12 The book discusses how division affect the fabric of cities and people s sense of identity and agency and are reflected in physical features architecture and urban planning The question of divided cities represents a complex and multistranded urban Ecology at once both social and spatial it cannot be limited to a single science or discipline such as social or spatial fields This suggests integrated and cross disciplinary understandings as well as integrated or parallel approaches and solutions Urban ecologies of division manifest in multiple forms One of their most palpable expressions is conflict with parallels around the world and often with correlations in the spatial fabric Violence in such contexts is often a surface expression of deeper socio economic or ideological differences Whether as a result of intervention by authority or by dissent between groups a divided city inevitably becomes a place of conflict in various forms and intensity eroding the joy of living and sense of collective belonging to the detriment of all In effect it erodes the collective advantage of being part of a more unified society A city exists in collections of social structures which mutually form a society A divided city implies divided social structures and in consequence a divided society The papers compiled in this book present many case studies of divided cities discussing the different causes of divisions and their effects on societies Some of the causes can be linked to conflicts wars colonialism or legislative political systems In response to the serious challenges resulting from these divisions the book aims to provide opportunities for new approaches and possibilities for new interventions and solutions making it significant to urban planners architects and policymakers
