Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. When you go outside on a hot summer day, usually your body begins to sweat. Why does your body do this? _____

2. **Humidity** is the amount of moisture in the air. Do you think sweating cools you down more on a dry day or a humid day? _____

Gizmo Warm-up

When sweat **evaporates**, heat energy is removed from our skin and our bodies cool down. But the amount of **water vapor** air can hold is limited, so sweat can only evaporate if the air still has the capacity to hold more water. If the humidity is high, less water can evaporate from the sweat on your skin.

The amount of water vapor in the air compared to the maximum amount air can hold is known as **relative humidity**. In the *Relative Humidity Gizmo™*, you will use a **psychrometer** to determine relative humidity. A psychrometer has two thermometers. The **dry bulb** thermometer measures air temperature. The second thermometer has a **wet bulb**. As water evaporates from the wet bulb, its temperature decreases relative to the air temperature.

1. Do you think the wet bulb will cool down more on a dry or humid day? _____
2. Click **Play** (▶) and observe the thermometers for about 24 simulated hours. Describe some of the changes in temperature for both thermometers: _____
