Chapter 10 Photosynthesis

Students find this chapter quite challenging. Fortunately, some of the key concepts, such as chemiosmosis and redox, were discussed previously in the chapter on respiration and fermentation. The new key concepts are light as energy, light absorption and energy conversion by pigments, and linear and cyclic electron flow. Students are challenged to identify the relationships between the light reactions and the Calvin cycle, as well as the adaptive significance of C4 and CAM pathways. Comparison and contrast between photosynthesis and respiration, the significance of photosynthesis to Earth history and evolution of life, and the role of photosynthesis in global carbon cycles and environmental change are important topics to engage students.

Multiple-Choice Questions

- A) NADP is produced.
- B) NADPH is reduced to NADP⁺.
- C) Carbon dioxide is incorporated into PGA.
- D) ATP is phosphorylated to yield ADP.
