

Regulation of Gene Expression

- **Prokaryotic Gene Expression**
- **Lac Operon** – has a promoter region, an operator, 3 structural genes, and a repressor binding site.
- If **no lactose** is present, the *lac* repressor protein binds to the operator and prevents transcription by not allowing RNA polymerase to bind to the promoter.
- If lactose is present, lactose binds to the repressor protein and the protein cannot bind to the operator. RNA polymerase is free to bind to the promoter and transcription is initiated.
