The Science of Learning Joseph J. Pear, 2016-03-02 For over a century and a quarter the science of learning has expanded at an increasing rate and has achieved the status of a mature science It has developed powerful methodologies and applications The rise of this science has been so swift that other learning texts often overlook the fact that like other mature sciences the science of learning has developed a large body of knowledge The Science of Learning comprehensively covers this knowledge in a readable and highly systematic manner Methodology and application are discussed when relevant however these aspects are better appreciated after the reader has a firm grasp of the scientific knowledge of learning processes Accordingly the book begins with the most fundamental and well established principles of the science and builds on the preceding material toward greater complexity The connections of the material with other sciences especially its sister science biology are referenced throughout Through these frequent references to biology and evolution the book keeps in the forefront the recognition that the principles of learning apply to all animals Thus in the final section the book brings together all learning principles studied in research settings by demonstrating their relevance to both animals and humans in their natural settings For animals this is the untamed environment of their niches for humans it is any social environment for Homo sapiens is the social and learning animal par excellence

Principles of Behavior Richard W. Malott, Joseph T. Shane, 2015-10-02 This book serves as a general liberal arts introduction to behavior analysis as well as a first step in becoming a professional behavior analyst at the BA MA or the PhD EdD level It presents various case studies and examples that help readers to apply principles of behavior to real life

*Fundamental Properties of the Human Nervous System* V. Nebylitsyn, 2013-03-08 Although today differential psychology embraces a large and ever increasing body of facts conclusions and practical recommendations which have wide applicability a number of critical problems are still unresolved or only partly resolved One of the most important of these is the relationship between individual variations in human behavior and in individual features of a range of correlated physiological functions Adequate concepts exist for understanding individual variations in some physiological functions underlying specific aspects speed tempo rhythm amplitude of the flow of psychical activity This fact alone is of considerable importance especially when we consider that such dynamic features can and sometimes do in a fundamental way modulate psychological functioning If we consider in addition that in certain circumstances these variables have a direct and sometimes decisive effect on the final behavioral outcome it seems obvious that the parameters of physiologically active systems determine a number of important features of complex human behavior According to Pavlov the most important of these is that system comprising central nervous system properties which determine the generation of excitatory and inhibitory processes in the structures of the central nervous system The concept of basic nervous system properties as leading parameters of the psychophysiological organization of individuality seems to be one of the outstanding achievements of the Pavlovian school It provided the framework within which investigators could attempt to determine experimentally individual features of behavior and reactivity
