Directions: Use the equations below to answer the following questions.

1. What are the reactants in this chemical reaction?

$\text{Zn}(s) + \text{S}(s)$ - Zinc and Sulphur.

2. What is the product? $\text{ZnS}(s)$ - Zinc Sulfide

3. What is the physical state of both the reactants and the products?

Reactants - They are both solid Product- Solid

4. According to the law of conservation of mass, if the total mass of the product in this chemical reaction is 14 g, what must the combined masses of the reactants be?

If the total mass is 14g, then the reactants should add up to form 14g.

5. What name describes the product in this reaction? Two molecules of water

6. What names describe the reactants? 2 Oxygen atoms and 4 Hydrogen atoms.

7. What are the physical states of the reactants in this reaction?

The physical states of the reactants are in gaseous form.

8. What is the physical state of the product? Liquid form

9. What do the coefficients tell you about the ratio of the reactants?

It tells you the ratio of the reactants by giving the number of atoms present. So, the ratio of the reactants are 4:2.

10. How many units of the product are produced? There are 2 units of the product that is produced.

Directions: Write chemical equations for the following reactions.

11. One unit of methane gas (CH_4) plus two units of oxygen gas (O_2) produce one unit of carbon dioxide gas (CO_2) and two units of liquid water.

12. One unit of aqueous aluminum sulfate ($\text{Al}_2(\text{SO}_4)_3$) plus three units of aqueous barium chloride (BaCl_2) yield two units of aqueous aluminum chloride (AlCl_3) plus three units of solid barium sulfate (BaSO_4).

13. Two units of solid sodium (Na) plus one unit of chlorine gas (Cl_2) produce two units of sodium chloride (NaCl), a solid.

and consequent rem *The Deformation and Processing of Structural Materials* Z. X. Guo, 2005-05-25 Having a good understanding of a construction material's performance under different conditions is essential for helping engineers in selecting the right type of material for a job and for setting design specifications. Keeping abreast of the latest research is an important part of this. The deformation and processing of structural materials is divided into eight chapters, each one exploring a material's processing and deformation behaviour. They also consider how the microstructural composition of materials is affected by processing and what influence this has on its subsequent in situ performance. The materials and behaviours looked at in the chapters include aluminium and its alloys, magnesium alloys, ferrous alloys, superalloys, Ni-based alloys, semisolid metal, SSM, processing of metallic alloys, plastic deformation of intermetallic alloys, metal matrix composites (MMCs) and fine grain superplasticity in SP materials. The first of its kind to give comprehensive coverage to the subject, *The deformation and processing of structural materials* is a valuable resource for engineers, researchers in mechanical, civil and structural engineering. Contains research on the performance of materials. Valuable resource for researchers in mechanical, civil and structural engineering. Comprehensive coverage to the deformation and processing of all types of structural materials.
