Foundations of Restoration Ecology Donald A. Falk, Margaret A. Palmer, Joy B. Zedler, 2013-03-19 As the practical application of ecological restoration continues to grow there is an increasing need to connect restoration practice to areas of underlying ecological theory Foundations of Restoration Ecology is an important milestone in the field bringing together leading ecologists to bridge the gap between theory and practice by translating elements of ecological theory and current research themes into a scientific framework for the field of restoration ecology Each chapter addresses a particular area of ecological theory covering traditional levels of biological hierarchy such as population genetics demography community ecology as well as topics of central relevance to the challenges of restoration ecology such as species interactions fine scale heterogeneity successional trajectories invasive species ecology ecophysiology Several chapters focus on research tools research design statistical analysis modeling or place restoration ecology research in a larger context large scale ecological phenomena macroecology climate change and paleoecology evolutionary ecology The book makes a compelling case that a stronger connection between ecological theory and the science of restoration ecology will be mutually beneficial for both fields restoration ecology benefits from a stronger grounding in basic theory while ecological theory benefits from the unique opportunities for experimentation in a restoration context Foundations of

Restoration Ecology advances the science behind the practice of restoring ecosystems while exploring ways in which restoration ecology can inform basic ecological questions. It provides the first comprehensive overview of the theoretical foundations of restoration ecology and is a must have volume for anyone involved in restoration research, teaching or practice.

Ecology, Environmental Science and Conservation 2nd Edition JS Singh | SP Singh | SR Gupta | Rishikesh Singh, The updated second edition of the book offers an innovative synthesis of fundamental ecological concepts and practical applications in environmental science and conservation. It is the first textbook on the subject by eminent Indian researchers and presents most of the examples from the Indian subcontinent. The book covers a wide range of topics including fundamental concepts required to comprehend the physical environment, population dynamics, community characteristics, patterns and gradients in biodiversity, ecosystem functioning and dynamics, and the study of biogeography. It also addresses applied topics such as environmental pollution, impact assessment, natural resource management, biodiversity conservation, ecosystem services, global climate change, ecosystem restoration, urban ecology and sustainable development. The main issues are discussed within the sustainability framework, considering humans as part of ecosystems and recognising that sustainable development requires the integration of ecology with social sciences for policy formulation and implementation. The updated edition of the book aligns with the National Education Policy 2020 and the revised UGC Guidelines. It aims to meet the needs of students in basic and multidisciplinary courses in ecology and environmental science as well as professionals in agriculture, forestry and geography at both the graduate and postgraduate levels.

Riverine Ecology Volume 1 Susanta Kumar Chakraborty, 2021-03-01. This book is part of a two volume set that offers an innovative approach towards developing methods and tools for assigning conservation categories of threatened taxa and their conservation strategies by way of different phases of eco restoration in the context of freshwater river systems of tropical bio geographic zones. The set provides a considerable volume of research on the biodiversity component of river ecosystems, seasonal dynamics of physical chemical parameters, geo hydrological properties, types, sources and modes of action of different types of pollution, river restoration strategies and methodologies for the ongoing ecological changes of river ecosystems. Volume 1 provides an in depth analysis of different theories with international relevance pertaining to the functioning of river ecosystems, shaping their structure and contributing ecological services and includes the principles of

riverine ecology such as biogeochemical cycles physiography hydrogeology and physico chemical parameters It covers the basic concepts and principles of water within riverine ecosystems and the underlying ecological principles operating to ensure ecological stability and sustainability of the fluvial ecosystem The book explains the ecofunctionality of different geomorphological hydrological and physico chemical factors and processes in changing time scales and spaces with special emphasis on the tropical fresh water rivers in India

One Health: The Well-being Impacts of Human-nature Relationships Eric Brymer, Elizabeth Louise Freeman, Miles Richardson, 2019-11-07 In recent years there has been a growing body of evidence from fields such as public health architecture ecology landscape forestry psychology sport science psychiatry geography suggesting that nature enhances psychological health and wellbeing Physical activity in the presence of nature feelings of connection to nature engagement with nature specific environmental features e.g. therapeutic water and trees and images of real and virtual nature have all been posited as important wellbeing facilitators Thus the association between natural environments and health outcomes might be more complex than initially understood Pritchard Richardson Sheffield Karmanov Freeman Akhurst 2015 in the development of wellbeing and health outcomes Furthermore traditional theoretical notions such as Biophilia topophilia restoration theories and stress reduction theories typically used to interpret findings are also being critiqued Often one of the main barriers for practitioners is the vast array of theories that claim to effectively explain research findings but that tend to be only partially relevant e.g. for Physical activity or restoration focus on the characteristics of the person e.g. nature relatedness and only some features of the landscape e.g. therapeutic landscapes This special edition therefore brings together cutting edge ideas and research from a wide set of disciplines with the purpose of exploring interdisciplinary or trans disciplinary approaches to understanding the psychological health and wellbeing benefits of human nature interactions

Flow, Mass Transport and Ecological Process in Land-Freshwater-Marine Ecosystems on Earth Weijie Wang, Senlin Zhu, Guotao Cui, 2023-12-05 **Linking Ecosystem**

Function to Microbial Diversity Anne E. Bernhard, John J. Kelly, 2016-10-20 Understanding the link between microbial diversity and ecosystem processes is a fundamental goal of microbial ecologists yet we still have a rudimentary knowledge of how changes in diversity affect nutrient cycling and energy transfer in ecosystems Due to the complexity of the problem many published studies on this topic have been conducted in artificial or manipulated systems Although researchers have begun to expose some possible mechanisms using these approaches most have not yet been able to produce conclusive results that relate directly to natural systems The few studies that have explored the link between diversity and activity in natural systems have typically focused on specific nutrient cycles or processes such as nitrification denitrification and organic carbon degradation pathways and the microbes that mediate them What we have learned from these studies is that there are often strong associations between the physical and chemical features of the environment the composition of the microbial communities and their activities but the rules that govern these associations have not been fully elucidated These earlier studies of microbial diversity and processes in natural systems provide a framework for additional studies to broaden our understanding of the role of microbial diversity in ecosystem function The problem is complex but with recent advances in sequencing technology omics and in situ measurements of ecosystem processes and their applications to microbial communities making direct connections between ecosystem function and microbial diversity seems more tractable than ever

Handbook of Biological Control T. W. Fisher, Thomas S. Bellows, L. E. Caltagirone, D. L. Dahlsten, Carl B. Huffaker, G. Gordh, 1999-09-20 For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens However these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist As a result the use of biological controlling agents is increasing This book is a comprehensive and authoritative handbook of biological control
