Nanosensor Technologies for Environmental Monitoring Inamuddin, Abdullah M. Asiri, 2020-07-15 Advanced materials and nanotechnology is a promising emerging field involving the use of nanoparticles to facilitate the detection of various physical and chemical parameters including temperature humidity pH metal ion anion small organic or inorganic molecules gases and biomolecules responsible for environmental issues that can lead to diseases like cancer diabetes osteoarthritis bacterial infections and brain retinal and cardiovascular diseases By monitoring environmental samples and detecting these environmental issues advanced nanotechnology in this type of sensory technology is able to improve daily quality of life

Although these sensors are commercially available for the detection of monovalent cations anions gases volatile organic molecules heavy metal ions and toxic metal ions many existing models require significant power and lack advanced technology for more quality selectivity and sensitivity There is room in these sensors to optimize their selectivity reversibility on off ratio response time and their environmental stability in real world operating conditions This book explores the methods for the development and design of environmentally friendly simple reliable and cost effective electrochemical nanosensors using powerful nanostructured materials More specifically it highlights the use of various electrochemical based biosensor sensors involved in the detection of monovalent cations anions gases volatile organic molecules heavy metal ions and toxic metal ions with the ultimate goal of seeing these technologies reach market **The Semantics of Knowledge**

Attributions Michael Blome-Tillmann,2022-06-02 In this book Michael Blome Tillmann offers a critical overview of the current debate on the semantics of knowledge attributions The book is divided into five parts Part 1 introduces the reader to the literature on knowledge attributions by outlining the historical roots of the debate and providing an in depth discussion of epistemic contextualism After examining the advantages and disadvantages of the view Part 2 offers a detailed investigation of epistemic impurism or pragmatic encroachment views while Part 3 is devoted to a careful examination of epistemic relativism and Part 4 to two different types of strict invariantism psychological and pragmatic The final part of the book explores Presuppositional Epistemic Contextualism a version of contextualism that is argued to provide a more powerful and elegant account of the semantics of knowledge attributions than many of its competitors A clear and precise account is provided of the main principles underlying each view and of how they aim to explain the pertinent data and resolve philosophical puzzles and challenges The book also provides charts outlining the relations between the positions discussed and offers suggestions for further reading Alginate Biomaterial

Challenges for Cephalopod Science Lindy Holden-Dye, Giovanna Ponte, Graziano Fiorito, A. Louise Allcock, Ryuta Nakajima, Erica A. G. Vidal, Tarla Rai Peterson, 2020-02-12 The last five years have been extremely challenging but also very innovative for cephalopod science and the outstanding tradition of biological contribution with cephalopod molluscs as key players in science and human activities and interests has continued This Research Topic is one of several dedicated to cephalopod molluscs e g Hanke and Osorio 2018 Ponte et al 2018 hosted by Frontiers over the last few years not to mention other papers published separately Highlighting of cephalopod science is important because it has much to offer not only the life science community but also more broadly the public perception of science and its understanding and relationship with scientific endeavour and cephalopods as living organisms and part of our everyday life at least for most of us This contribution illustrates the key needs that need to be overcome by the cephalopod research community i e rapid and effective mechanisms for exchange of knowledge and resources sharing of laboratory protocols videos tissues samples and data sets innovative approaches and initiatives in public engagement The cuttlefish comic included is an excellent example of a type of media that can be used to expand scientific knowledge to the public and human relationship with live animals There are strategic challenges in convincing globally distributed policy makers and funders of the relevance of cephalopods in scientific advances and also in the regulatory aspects since cephalopods are the only invertebrates whose use is regulated in Europe in a research context and this increases the need for integrated oversight and direction in terms of ethics and animal welfare e g Jacquet et al 2019a 2019b Ponte et al 2019 This Research Topic also aligns with the interests of the cephalopod community in stimulating public interest in cephalopods extending to a broader audience that could include chefs and gourmets and fishers and scientists aiming to develop sustainable food resources CephInAction Towards Future Challenges for Cephalopod Science Research Topic includes 14 papers from about 40 authors representing ten different countries thus overlapping with the original parties that contributed to the COST FA1301 that together with CephRes promoted and supported this editorial initiative

Nonlinear Analysis in Neuroscience and Behavioral Research Tobias A.

Mattei, 2016-10-31 Although nonlinear dynamics have been mastered by physicists and mathematicians for a long time as most physical systems are inherently nonlinear in nature the recent successful application of nonlinear methods to modeling and predicting several evolutionary ecological physiological and biochemical processes has generated great interest and enthusiasm among researchers in computational neuroscience and cognitive psychology Additionally in the last years it has been demonstrated that nonlinear analysis can be successfully used to model not only basic cellular and molecular data but also complex cognitive processes and behavioral interactions The theoretical features of nonlinear systems such as unstable periodic orbits period doubling bifurcations and phase space dynamics have already been successfully applied by several research groups to analyze the behavior of a variety of neuronal and cognitive processes Additionally the concept of strange attractors has led to a new understanding of information processing which considers higher cognitive functions such as

language attention memory and decision making as complex systems emerging from the dynamic interaction between parallel streams of information flowing between highly interconnected neuronal clusters organized in a widely distributed circuit and modulated by key central nodes Furthermore the paradigm of self organization derived from the nonlinear dynamics theory has offered an interesting account of the phenomenon of emergence of new complex cognitive structures from random and non deterministic patterns similarly to what has been previously observed in nonlinear studies of fluid dynamics Finally the challenges of coupling massive amount of data related to brain function generated from new research fields in experimental neuroscience such as magnetoencephalography optogenetics and single cell intra operative recordings of neuronal activity have generated the necessity of new research strategies which incorporate complex pattern analysis as an important feature of their algorithms Up to now nonlinear dynamics has already been successfully employed to model both basic single and multiple neurons activity such as single cell firing patterns neural networks synchronization autonomic activity electroencephalographic measurements and noise modulation in the cerebellum as well as higher cognitive functions and complex psychiatric disorders Similarly previous experimental studies have suggested that several cognitive functions can be successfully modeled with basis on the transient activity of large scale brain networks in the presence of noise Such studies have demonstrated that it is possible to represent typical decision making paradigms of neuroeconomics by dynamic models governed by ordinary differential equations with a finite number of possibilities at the decision points and basic heuristic rules which incorporate variable degrees of uncertainty This e book has include frontline research in computational neuroscience and cognitive psychology involving applications of nonlinear analysis especially regarding the representation and modeling of complex neural and cognitive systems Several experts teams around the world have provided frontline theoretical and experimental contributions as well as reviews perspectives and commentaries in the fields of nonlinear modeling of cognitive systems chaotic dynamics in computational neuroscience fractal analysis of biological brain data nonlinear dynamics in neural networks research nonlinear and fuzzy logics in complex neural systems nonlinear analysis of psychiatric disorders and dynamic modeling of sensorimotor coordination Rather than a comprehensive compilation of the possible topics in neuroscience and cognitive research to which non linear may be used this e book intends to provide some illustrative examples of the broad range of
