Geochemistry Harry Y. McSween, Steven McAfee Richardson, Maria E. Uhle, 2003 Written expressly for undergraduate and graduate geologists this book focuses on how geochemical principles can be used to solve practical problems The attention to problem solving reflects the authors belief that showing how theory is useful in solving real life problems is vital for learning The book gives students a thorough grasp of the basic principles of the subject balancing the traditional equilibrium perspective and the kinetic viewpoint The first half of the book considers processes in which temperature and pressure are nearly constant After introductions to the laws of thermodynamics to fundamental equations for flow and diffusion and to solution chemistry these principles are used to investigate diagenesis weathering and natural waters The second half of the book applies thermodynamics and kinetics to systems undergoing changes in temperature and pressure during magmatism and metamorphism This revised edition incorporates new geochemical discoveries as examples of processes and pathways with new chapters on mineral structure and bonding and on organic matter and biomarkers Each chapter has worked problems and the authors assume that the student has had a year of college level chemistry and a year of calculus Praise for the first edition A truly modern geochemistry book Very well written

and quite enjoyable to read An excellent basic text for graduate level instruction in geochemistry Journal of Geological Education An up to date broadly conceived introduction to geochemistry Given the recent flowering of geochemistry as an interdisciplinary science and given the extent to which it now draws upon the fundamentals of thermodynamics and kinetics to understand earth and planetary processes this timely and rigorous book is welcome indeed *Geochimica et Cosmochimica Acta*

Numerical Algorithms for Personalized Search in Self-organizing Information Networks Sep Kamvar,2010-09-07 This book lays out the theoretical groundwork for personalized search and reputation management both on the Web and in peer to peer and social networks Representing much of the foundational research in this field the book develops scalable algorithms that exploit the graphlike properties underlying personalized search and reputation management and delves into realistic scenarios regarding Web scale data Sep Kamvar focuses on eigenvector based techniques in Web search introducing a personalized variant of Google s PageRank algorithm and he outlines algorithms such as the now famous quadratic extrapolation technique that speed up computation making personalized PageRank feasible Kamvar suggests that Power Method related techniques ultimately should be the basis for improving the PageRank algorithm and he presents algorithms that exploit the convergence behavior of individual components of the PageRank vector Kamvar then extends the ideas of reputation management and personalized search to distributed networks like peer to peer and social networks He highlights locality and computational considerations related to the structure of the

network and considers such unique issues as malicious peers He describes the EigenTrust algorithm and applies various PageRank concepts to P2P settings Discussion chapters summarizing results conclude the book s two main sections Clear and thorough this book provides an authoritative look at central innovations in search for all of those interested in the subject

Windows and Doors N. Thomas Johnson-Medland,2012-12-18 The poems and pictures that have been collected here are prompts toward leaning into the places you have been and become Clearly every doorway you have crossed over and every window you have gazed yourself through have become woven into the fabric of the you that is now holding this place as here and now The you that is here has moved through immense passages They are all inside of you now Reach back and in and set yourself free to bathe in all you have leaned into becoming over time Journey into the chasm of your life Stand in awe at the arrangement of the infinitesimal experiences of grandeur and suspense You have pushed and pulled been pushed and pulled through endless doors and

windows of the Spirit Never deny the way all of that has mingled itself into the one who is viewing the life you believe is yours It is made up of an endless number yours that in the end may not be the one you at all but a myriad of places to feel from through time A broad and plasmic you spread out through each and every window and door of space and time
