

UCM

Installation and set-up guide

DESCRIPTION

Model UCM is a low voltage DC powered Universal Conditioning Module that can accept a wide range of analogue inductive transducer types and is suitable to drive LVDTs and RVDTs. For the full product specification, refer to the UCM product brochure.

MOUNTING

- The UCM module is designed to be mounted on a bulkhead close to the transducer, by using 4 x M5 cap head screws, 28mm long (minimum) through the mounting holes that are located under the housing lid. The recommended screw tightening torque is 4Nm.
- The user should also ensure that the rubber seal is properly located in the lid groove prior to re-fitting the lid after setup. Recommended tightening torque for the lid screws is 2Nm.

WIRING NOTES

- The supply, transducer and output connections are routed through two IP68 rated cable glands that can accommodate cable diameters of between 3 and 8mm. The user should ensure that the cable glands are tightened sufficiently to ensure cables are clamped and sealed.
- Users should also ensure adequate sealing of the opposite end connections on supply, transducer and output cables to ensure moisture cannot migrate down the inside of the cables into the UCM.
- Connections are made to screw terminal blocks on the UCM circuit board.
- The enclosure is not connected internally to ground, so it can be mounted on a chassis carrying a voltage potential other than 0Vdc.
- If in doubt about wiring to ground, consult your systems engineer.
- **It is essential that correct connections are made before connecting the power supply. Incorrect connections or power applied to transducer connection terminals may destroy the UCM on power-up.**
- The UCM module has a supply current requirement of <20mA.

CONNECTIONS

- The UCM, with or without option cards fitted, only requires a single supply voltage connected between **SUPPLY GND** and **SUPPLY VPOS**.
- When the **VM** (Voltage Module) option card is used, an internal negative rail generator enables zero and negative output voltages to be achieved.
- If you have a dual supply available, you can connect -10V to -30Vdc to **SUPPLY VNEG**, in which case the internal negative supply generator on the **VM** option card will be disabled and current will be drawn from the external supply. To obtain outputs of -10Vdc or -7.5Vdc, the external negative supply must be at least -13.5Vdc.
- With the lid removed, unscrew the cable glands **C1** & **C2** (Fig.1). Pass the power supply/output signal cable through gland **C1** into "SUPPLY" zone on UCM board. Connect the power supply and output connections to the terminals on the UCM board, as indicated below and shown in Fig.1.
