Pose Estimation and Tracking Rustam Stolkin,2007-06-01 This book reports recent advances in the use of pattern recognition techniques for computer and robot vision The sciences of pattern recognition and computational vision have been inextricably intertwined since their early days some four decades ago with the emergence of fast digital computing All computer vision techniques could be regarded as a form of pattern recognition in the broadest sense of the term Conversely if one looks through the contents of a typical international pattern recognition conference proceedings it appears that the large majority perhaps 70 80% of all pattern recognition papers are concerned with the analysis of images In particular these sciences overlap in areas of low level vision such as segmentation edge detection and other kinds of feature extraction and region identification which are the focus of this book **Bridging the Gap Between AI and Reality** Bernhard

Steffen,2024-10-30 This open access book constitutes revised selected papers from the First International Conference on Bridging the Gap between AI and Reality AISoLA 2023 which took place in Crete Greece in October 2023 The papers included in this book focus on the following topics The nature of AI based systems ethical economic and legal implications of AI systems in practice ways to make controlled use of AI via the various kinds of formal methods based validation techniques dedicated applications scenarios which may allow certain levels of assistance and education in times of deep learning *Sun Tracker, Automatic Solar- Tracking, Sun- Tracking Systems, Solar Trackers and Automatic Sun Tracker Systems* Солнечная слежения Gerro Prinsloo,Robert Dobson,2014-10-12 This book details Solar Tracking Automatic Sun Tracking Systems and Solar Trackers Book and literature review is ideal for sun and moon tracking in solar applications for sun rich

countries such as the USA Spain Portugal Mediterranean Italy Greece Mexico Portugal China India Brazil Chili Argentina South America UAE Saudi Arabia Middle East Iran Iraq etc A solar tracker is a device that orients a payload toward the sun Like a satellite tracker or moon tracker it tracks the celestial object in the sky on its orbital path of apparent movement A programmable computer based solar tracking device includes principles of solar tracking solar tracking systems as well as microcontroller microprocessor and or PC based solar tracking control to orientate solar reflectors solar lenses photovoltaic panels or other optical configurations towards the sun Motorized space frames and kinematic systems ensure motion dynamics and employ drive technology and gearing principles to steer optical configurations such as mangin parabolic conic or cassegrain solar energy collectors to face the sun and follow the sun movement contour continuously In harnessing power from the sun through a solar tracker or practical solar tracking system renewable energy control automation systems require automatic solar tracking software and solar position algorithms to accomplish dynamic motion control with control automation architecture circuit boards and hardware On axis sun tracking system such as the altitude azimuth dual axis or multi axis solar tracker systems use a sun tracking algorithm or ray tracing sensors or software to ensure the sun s passage through the sky is traced with high precision in automated solar tracker applications right through summer solstice solar equinox and winter solstice From sun tracing software perspective the sonnet Tracing The Sun has a literal meaning Within the context of sun track and trace this book explains that the sun s daily path across the sky is directed by relatively simple principles and if grasped understood then it is relatively easy to trace the sun with sun following software Sun position computer software for tracing the sun are available as open source code sources that is listed in this book Ironically there was even a system called sun chaser said to have been a solar positioner system known for chasing the sun throughout the day Using solar equations in an electronic circuit for solar tracking is quite simple even if you are a novice but mathematical solar equations are over complicated by academic experts and professors in text books journal articles and internet websites In terms of solar hobbies scholars students and Hobbyist s looking at solar tracking electronics or PC programs for solar tracking are usually overcome by the sheer volume of scientific material and internet resources which leaves many developers in frustration when search for simple experimental solar tracking source code for their on axis sun tracking systems This booklet will simplify the search for the mystical sun tracking formulas for your sun tracker innovation and help you develop your own autonomous solar tracking controller By directing the solar collector directly into the sun a solar harvesting means or device can harness sunlight or thermal heat This is achieved with the help of sun angle formulas solar angle formulas or solar tracking procedures for the calculation of sun s position in the sky Automatic sun tracking system software includes algorithms for solar altitude azimuth angle calculations required in following the sun across the sky In using the longitude latitude GPS coordinates of the solar tracker location these sun tracking software tools supports precision solar tracking by determining the solar altitude azimuth coordinates for the sun trajectory in altitude azimuth

tracking at the tracker location using certain sun angle formulas in sun vector calculations. Instead of following the sun, software a sun tracking sensor such as a sun sensor or webcam or video camera with vision based sun following image processing software can also be used to determine the position of the sun optically. Such optical feedback devices are often used in solar panel tracking systems and dish tracking systems. Dynamic sun tracing is also used in solar surveying DNI analyser and sun surveying systems that build solar infographics maps with solar radiance irradiance and DNI models for GIS geographical information system. In this way geospatial methods on solar environment interaction makes use of geospatial technologies GIS Remote Sensing and Cartography Climatic data and weather station or weather center data as well as queries from sky servers and solar resource database systems i.e. on DB2 Sybase Oracle SQL MySQL may also be associated with solar GIS maps. In such solar resource modelling systems a pyranometer or solarimeter is normally used in addition to measure direct and indirect scattered dispersed reflective radiation for a particular geographical location. Sunlight analysis is important in flash photography where photographic lighting are important for photographers. GIS systems are used by architects who add sun shadow applets to study architectural shading or sun shadow analysis solar flux calculations optical modelling or to perform weather modelling. Such systems often employ a computer operated telescope type mechanism with ray tracing program software as a solar navigator or sun tracer that determines the solar position and intensity. The purpose of this booklet is to assist developers to track and trace suitable source code and solar tracking algorithms for their application whether a hobbyist scientist technician or engineer. Many open source sun following and tracking algorithms and source code for solar tracking programs and modules are freely available to download on the internet today. Certain proprietary solar tracker kits and solar tracking controllers include a software development kit SDK for its application programming interface API attributes. Pebble Widget libraries widget toolkits GUI toolkit and UX libraries with graphical control elements are also available to construct the graphical user interface GUI for your solar tracking or solar power monitoring program. The solar library used by solar position calculators solar simulation software and solar contour calculators include machine program code for the solar hardware controller which are software programmed into Micro controllers Programmable Logic Controllers PLC programmable gate arrays Arduino processor or PIC processor. PC based solar tracking is also high in demand using C Visual Basic VB as well as MS Windows Linux and Apple Mac based operating systems for sun path tables on Matlab Excel. Some books and internet webpages use other terms such as sun angle calculator sun position calculator or solar angle calculator. As said such software code calculate the solar azimuth angle solar altitude angle solar elevation angle or the solar Zenith angle. Zenith solar angle is simply referenced from vertical plane the mirror of the elevation angle measured from the horizontal or ground plane level. Similar software code is also used in solar calculator apps or the solar power calculator apps for IOS and Android smartphone devices. Most of these smartphone solar mobile apps show the sun path and sun angles for any location and date over a 24 hour period. Some smartphones include augmented reality features in

which you can physically see and look at the solar path through your cell phone camera or mobile phone camera at your phone's specific GPS location. In the computer programming and digital signal processing DSP environment, free open source program code are available for VB, Net, Delphi, Python, C, C++, Swift, ADM, F, Flash, Basic, QBasic, GBasic, KBasic, SIMPL language, Squirrel, Solaris, Assembly language on operating systems such as MS Windows, Apple Mac, DOS or Linux OS. Software algorithms predicting position of the sun in the sky are commonly available as graphical programming platforms such as Matlab, Mathworks, Simulink, models, Java applets, TRNSYS simulations, Scada system apps, Labview module, Beckhoff, TwinCAT, Visual Studio, Siemens, SPA mobile and iPhone apps, Android or iOS tablet apps and so forth. At the same time, PLC software code for a range of sun tracking automation technology can follow the profile of sun in sky for Siemens, HP, Panasonic, ABB, Allan Bradley, OMRON, SEW, Festo, Beckhoff, Rockwell, Schneider, Endress, Hauser, Fuji electric, Honeywell, Fuchs, Yokonawa or Muthibishi platforms. Sun path projection software are also available for a range of modular IPC, embedded PC motherboards, Industrial PC, PLC, Programmable Logic Controller and PAC, Programmable Automation Controller such as the Siemens S7 1200 or Siemens Logo, Beckhoff IPC or CX series, OMRON PLC, Ercam PLC, AC500plc, ABB, National Instruments, NI PXI or NI cRIO, PIC processor, Intel 8051, 8085, IBM Cell, Power, Brain or Truenorth series, FPGA, Xilinx, Altera, Nios, Xeon, Atmel, megaAVR or Arduino, AtMega microcontroller with servo motor, stepper motor, direct current, DC, pulse width modulation, PWM, current driver or alternating current, AC, SPS or IPC variable frequency drives, VFD motor drives also termed adjustable frequency drive, variable speed drive, AC drive, micro drive or inverter drive for electrical, mechatronic, pneumatic or hydraulic solar tracking actuators. The above motion control and robot control systems include analogue or digital interfacing ports on the processors to allow for tracker angle orientation feedback control through one or a combination of angle sensor or angle encoder, shaft encoder, precision encoder, optical encoder, magnetic encoder, direction encoder, rotational encoder, chip encoder, tilt sensor, inclination sensor or pitch sensor. Note that the tracker's elevation or zenith axis angle may be measured using an altitude angle, declination angle, inclination angle, pitch angle or vertical angle, zenith angle sensor or inclinometer. Similarly, the tracker's azimuth axis angle may be measured with a azimuth angle, horizontal angle or roll angle sensor. Chip integrated accelerometer, magnetometer, gyroscope, type angle sensors can also be used to calculate displacement. Other options include the use of thermal imaging systems such as a Fluke thermal imager or robotic or vision based solar tracker systems that employ face tracking, head tracking, hand tracking, eye tracking and car tracking principles in solar tracking. With unattended, decentralised, rural, island, isolated or autonomous off grid power installations, remote control, monitoring, data acquisition, digital datalogging and online measurement and verification equipment becomes crucial. It assists the operator with supervisory control to monitor the efficiency of remote renewable energy resources and systems and provide valuable web based feedback in terms of CO2 and clean development mechanism, CDM reporting.
