Sports-Related Concussions in Youth National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on Sports-Related Concussions in Youth, 2014-02-04 In the past decade few subjects at the intersection of medicine and sports have generated as much public interest as sports related concussions especially among youth Despite

growing awareness of sports related concussions and campaigns to educate athletes coaches physicians and parents of young athletes about concussion recognition and management confusion and controversy persist in many areas Currently diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity Sports Related Concussions in Youth Improving the Science Changing the Culture reviews the science of sports related concussions in youth from elementary school through young adulthood as well as in military personnel and their dependents This report recommends actions that can be taken by a range of audiences including research funding agencies legislatures state and school superintendents and athletic directors military organizations and equipment manufacturers as well as youth who participate in sports and their parents to improve what is known about concussions and to reduce their occurrence Sports Related Concussions in Youth finds that while some studies provide useful information much remains unknown about the extent of concussions in youth how to diagnose manage and prevent concussions and the short and long term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms The culture of sports negatively influences athletes self reporting of concussion symptoms and their adherence to return to play guidance Athletes their teammates and in some cases coaches and parents may not fully appreciate the health threats posed by concussions Similarly military recruits are immersed in a culture that includes devotion to duty and service before self and the critical nature of concussions may often go unheeded According to Sports Related Concussions in Youth if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered then the culture in which these athletes perform and compete will become much safer Improving understanding of the extent causes effects and prevention of sports related concussions is vitally important for the health and well being of youth athletes The findings and recommendations in this report set a direction for research to reach this goal

Concussions Isabelle Gagnon, Alain Ptito, 2017-11-22 Sport related concussions have become an increasingly important topic as evidenced by recent media attention Due in large part to the complex nature of concussive injuries there is great discrepancy in the effect these injuries have on individual functioning and the type and nature of services that best facilitate recovery This book is intended as a complete reference guide dealing with sports related concussions Handbook of Neurological Sports Medicine Petraglia, Anthony, Bailes, Julian, Day, Arthur, 2014-07-15 Provides techniques for diagnosis and treatment of concussion and other injuries to the head spine and peripheral nervous system This evidence based reference bridges the gap between principles and practice to better manage these serious injuries Concussion in Sports, An Issue of Clinics in Sports Medicine William P. Meehan, Lyle J. Micheli, 2011-01-28 This issue of Clinics in Sports Medicine will explore all aspects of sports related concussion such as the biomechanics and epidemiology of concussions as well as special considerations for female and pediatric athletes The issue will also include articles on return to play and retiring decisions after sports related concussions Neurosurgical Care of Athletes Mark E. Oppenlander, 2022-01-03 This book provides a modern and up to date overview of the evaluation and management of sports related neuro trauma The primary target audience is the sports neurosurgeon who can be found on the sidelines of collision sports at all levels of play from high school to professional or who may care for these athletes in the acute setting in hospital or the outpatient clinics The reach of this book however will also extend to professionals in other fields of medicine due to some topics that extend outside the typical neurosurgical specialty ranging from chiropractic care in the evaluation and treatment of elite athletes to alternative medical therapies for concussion The importance of the emerging sports neurosurgeon subspecialty is exemplified by the adoption of a policy by the National Football League to require an Unaffiliated Neurotrauma Consultant on field for player safety This policy also speaks to the recent public awareness of the importance of recognizing and treating sports related neuro trauma This text aims to capitalize on this trend and become a multi specialty reference to anyone interested in the field Neurosurgical Care of Athletes serves as a comprehensive resource for physicians and researchers involved in sports related neuro trauma All chapters are prepared by experts in their fields and include the most up to date scientific and clinical information Foundations of Sport-Related Brain Injuries Semyon M. Slobounov, Wayne J. Sebastianelli, 2006-08-25 This book is the partial product of a conference on concussion in athletics held at the Pennsylvania State University April 29 30 2004 For a number of reasons it seemed timely to hold such a conference as well as to condense our current understanding of mechanisms predispositions and latest developments in evaluation and managements of sport related concussions in a single book format Despite dramatic advances in medicine traumatic brain injury commonly know as concussion is still one of the most puzzling and least understood injuries facing the sport medicine world today There still no universal agreement assigning the level of severity the sport related concussions nor there is any treatment besides the passage of time Medicines

inability to fully understanding concussion has led us to question when it is truly safe to return an athlete to full sport participation so threat for risk of re injury is minimized The need for a multidisciplinary approach to understanding the sport related concussions stem from recent evidence that there are long lasting residual behavioral psycho social and neural disabilities that are often overlooked using current research methods The notion of transient and rapid symptoms resolution is misleading since symptoms resolution is frequently not indicative of injury resolution There are no two traumatic brain injuries alike in mechanism symptomology or symptoms resolution Most grading scales are based on loss of consciousness and post traumatic amnesia both of which occur infrequently in sport related mild traumatic brain injuries The Handbook of Sport Neuropsychology Frank Webbe, 2011 Print CourseSmart
