Unit Overview

In this unit, students write the equations of quadratic functions to model situations and then graph these functions. They study methods of finding solutions to quadratic equations and interpreting these solutions. In the process, students learn about complex numbers.

Student Focus

Main Ideas for success in lessons 10-1, 10-2, & 10-3:

- Write equations of parabolas given a graph or key features
- Determine a quadratic function given three points on a plane
- Find a quadratic model given a set of data values
- Use a quadratic model to make predictions about data

Example:

Lesson 10-1:

	Vertical Axis of Symmetry	Horizontal Axis of Symmetry
Vertex	(h, k)	(h, k)
Focus	$(h, k + p)$	$(h + p, k)$
Directrix	horizontal line $y = k - p$	vertical line $x = h - p$
Equation	$y = \frac{1}{4p}(x - h)^2 + k$	$x = \frac{1}{4p}(y - k)^2 + h$

The general equation for a parabola whose vertex is located at the origin, focus at $(0, p)$, and directrix of $y = -p$ is $y = \frac{1}{4p}x^2$.

Computational Experiment Approach to Advanced Secondary Mathematics Curriculum Sergei Abramovich, 2014-05-08

This book promotes the experimental mathematics approach in the context of secondary mathematics curriculum by exploring mathematical models depending on parameters that were typically considered advanced in the pre digital education era. This approach by drawing on the power of computers to perform numerical computations and graphical constructions stimulates formal learning of mathematics through making sense of a computational experiment. It allows one in the spirit of Freudenthal to bridge serious mathematical content and contemporary teaching practice. In other words the notion of teaching experiment can be extended to include a true mathematical experiment. When used appropriately the approach creates conditions for collateral learning in the spirit of Dewey to occur including the development of skills important for engineering applications of mathematics. In the context of a mathematics teacher education program the book addresses a call for the preparation of teachers capable of utilizing modern technology tools for the modeling based teaching of mathematics with a focus on methods conducive to the improvement of the whole STEM education at the secondary level. By the same token using the book's pedagogy and its mathematical content in a pre college classroom can assist teachers in introducing students to the ideas that develop the foundation of engineering profession.

Quadratic Equations and Functions Workbook Norman Balason, 2021-06-19 The QUADRATIC EQUATIONS AND FUNCTIONS WORKBOOK is a resource that Algebra 2 students can use to practice solving quadratic equations writing quadratic equations graphing quadratic functions writing quadratic functions and solving word problems that involve quadratic equations and functions. There are nine sections in this workbook. Example problems with step by step solutions precede each type of problem for sections one through nine. Students should study these examples before starting the problems. This workbook also contains the step by step solutions for all problems. Section 1 begins with problems for students to use square roots to solve quadratic equations in simplest terms. The denominator for answers is rationalized. In Section 2 students solve quadratic equations by factoring and by using the Zero Product Property. Section 3 includes problems where students solve quadratic equations by completing the square. This workbook contains the derivation of the Quadratic Formula. In Section 4 students use the Quadratic Formula to solve quadratic equations. This workbook includes the derivation of the sum and product of roots for a quadratic equation in standard form. Section 5 is where students write quadratic equations given their roots. Students can use the Zero Product Property or the sum and product of its roots to do these problems. In Section 6 students explain why the graph of the quadratic function which is called a Parabola will open upward or downward. Then they determine if the graph will have a minimum or a maximum. Section 7 is where students graph quadratic functions that are in standard factored and vertex form. In Section 8 students use the coordinates for points on the graph of a quadratic function to write the quadratic function in factored vertex and standard form. Section 9 is where students solve word problems that involve quadratic equations and quadratic functions. Finally there are step by step solutions for all problems.
