This section contains Network related configurations of Squid. This plays important role on deciding socket addresses of squid to communicate with Remote servers and Neighbour caches. Generally port is where Squid listens for TCP and ICP requests and responses and IPAddress is to which squid binds and create socket addresses to complete the communication withother servers. (Includes Remote servers and Neighbour caching servers).Socket Addresses are defined by Number of Interfaces which Cache serverhas.More information on multicast is here.

This section comes to play only when Squid hierarchy is implemented for implementing multiple Squid cache boxes. Number of cache servers, Type of the configuration, Timeouts for communications between hierarchy and Objects which should not be cached locally are specified here. To configure this
