Dunn, 2009-02-08 Developments in telepathology are progressing at a great speed As a consequence there is a need for a broad overview of the field This first ever book on telepathology is presented in such a way that it should make it accessible to anyone independent of their knowledge of technology The text is designed to be used by all professionals including pathologists surgeons nurses and allied health professionals and computer scientists In a very short time driven by technical developments the field of telepathology has become too extensive to be covered by only a small number of experts Therefore this Telepathology book has been written with chapter contributions from a host of renowned international authorities in telepathology see the Table of Contents and the List of Contributors This ensures that the subject matter focusing on recent advances in telepathology is truly up to date Our guiding hope during this task was that as editors of multiple chapters we could still write with a single voice and keep

the content coherent and simple We hope that the clarity of this book makes up for any limitations in its comprehensiveness

Late Modern Subjectivity and its Discontents Kieran Keohane, Anders Petersen, Bert van den Bergh, 2017-03-16 This book analyses three of the most prevalent illnesses of late modernity anxiety depression and Alzheimer s disease in terms of their relation to cultural pathologies of the social body Usually these conditions are interpreted clinically in terms of individualized symptoms and responded to discretely as though for the most part unrelated to each other However these diseases also have a social and cultural profile that transcends their particular symptomologies and etiologies Anxiety depression and Alzheimer s are diseases related to disorders of the collective esprit de corps of contemporary society Multidisciplinary in approach the book addresses

questions of how these conditions are manifest at both the individual and collective levels in relation to hegemonic biomedical and psychologistic understandings. Rejecting such reductive diagnoses, the authors argue that anxiety, depression, and Alzheimer's disease, as well as other contemporary epidemics, are to be analysed in the light of individual and collective experiences of profound and radical changes in our civilization. A diagnosis of our times: Late Modern Subjectivity and its Discontents will appeal to a broad range of scholars with interests in health and illness, the sociology of medicine and contemporary life.

The Oxford Companion to Archaeology Brian M. Fagan, 1996-12-05

When we think of archaeology, most of us think first of its many spectacular finds: the legendary city of Troy, Tutankhamun's golden tomb, the three million year old footprints at Laetoli, the mile high city at Machu Picchu, the cave paintings at Lascaux. But as marvelous as these discoveries are, the ultimate goal of archaeology and of archaeologists is something far more ambitious. Indeed, it is one of humanity's great quests: to recapture and understand our human past across vast stretches of time as it was lived in every corner of the globe. Now in *The Oxford Companion to Archaeology*, readers have a comprehensive and authoritative overview of this fascinating discipline in a book that is itself a rare find: a treasure of up to date information on virtually every aspect of the field. The range of subjects covered here is breathtaking: everything from the domestication of the camel to Egyptian hieroglyphics to luminescence dating to the Mayan calendar to Koobi Fora and Olduvai Gorge. Readers will find extensive essays that illuminate the full history of archaeology from the discovery of Herculaneum in 1783 to the recent finding of the Ice Man and the ancient city of Uruk, and engaging biographies of the great figures in the field from Gertrude Bell, Paul Emile Botta, and Louis and Mary Leakey to V Gordon Childe, Li Chi, Heinrich Schliemann, and Max Uhle. The Companion offers extensive coverage of the methods used in archaeological research, revealing how archaeologists find sites, remote sensing, aerial photography, ground survey, how they map excavations and report findings, and how they analyze artifacts, radiocarbon dating, dendrochronology, stratigraphy, mortuary analysis. Of course, archaeology's great subject is humanity and human culture, and there are broad essays that examine human evolution ranging from our early primate ancestors to *Australopithecus* and *Cro-Magnon* to *Homo Erectus* and Neanderthals, and explore the many general facets of culture from art and architecture to arms and armor to beer and brewing to astronomy and religion. And perhaps most important, the contributors provide insightful coverage of human culture as it has been expressed in every region of the world. Here, entries range from broad overviews to treatments of particular themes to discussions of peoples, societies, and particular sites. Thus, anyone interested in North America would find articles that cover the continent from the Arctic to the Eastern woodlands to the Northwest Coast that discuss the Iroquois and Algonquian cultures, the hunters of the North American plains, and the Norse in North America, and that describe sites such as Mesa Verde, Meadowcroft, Rockshelter, Serpent Mound, and Poverty Point. Likewise, the coverage of Europe runs from the Paleolithic period to the Bronze and Iron Age to the Post Roman era, looking at peoples such as the Celts, the Germans, the Vikings, and the Slavs, and describes sites at Altamira, Pompeii, Stonehenge,

Terra Amata and dozens of other locales The Companion offers equally thorough coverage of Africa Europe North America Mesoamerica South America Asia the Mediterranean the Near East Australia and the Pacific And finally the editors have included extensive cross referencing and thorough indexing enabling the reader to pursue topics of interest with ease charts and maps providing additional information and bibliographies after most entries directing readers to the best sources for further study Every Oxford Companion aspires to be the definitive overview of a field of study at a particular moment of time This superb volume is no exception Featuring 700 articles written by hundreds of respected scholars from all over the world The Oxford Companion to Archaeology provides authoritative stimulating entries on everything from bog bodies to underwater archaeology to the Pyramids of Giza and the Valley of the Kings *Encyclopedia of Case Study Research* Albert J. Mills, Gabrielle Durepos, Elden Wiebe, 2010 This is the authoritative reference work in the field An interdisciplinary set it investigates the extensive history design and methods of case study research **Cumulated Index Medicus** ,1966
