topics Ten appendices filled with helpful data and reference materials Ideal for a first course in mass transfer operations this text has proven to be invaluable to students in chemical and environmental engineering as well as researchers and university faculty

Tubular Heat Exchangers Samuel Jorge Marques Cartaxo, 2022-04-19 This book explains basics from physical chemistry and fluid mechanics to understand construct and apply tubular heat exchangers for the chemical industry Examples from practice highlight the required equations physical properties and raise critical steps for the design of for example tubular double pipe multi tubes and finned heat exchangers Exercises and corresponding solutions deepen the gained knowledge and clarify the described theory

Model Elements and Network Solutions of Heat, Mass and Momentum Transport Processes George L. Danko, 2016-10-26 This work provides an enormous contribution to the broad effort of modeling heat mass and momentum transport in multi physics problems with the development of new solution approaches It revisits the time honored technique of network application using flow network solutions for all transport process components for a coupled modeling task The book further provides as formulation of the conservation laws for mass energy and momentum specifically for the branches and nodes of transport networks using the combination of the Eulerian and Lagrangean modeling methods With the extension of Bernoulli's original concept a new solution is given for the flow field of viscous and compressible fluids as driven by the balance of mechanical energy coupled to the thermodynamics of the transport system Applicable to simple or large scale tasks the new model elements and methods are built on first principles Throughout the work the book provides original formulations their mathematical derivations as well as applications in a numerical solution scheme
