The Mass of Galaxies at Low and High Redshift Ralf Bender, 2003-01-23 Measuring the masses of galaxies as a function of redshift is perhaps one of the most challenging open issues in current astronomical research The evolution of the baryonic and dark matter components of galaxies is not only a critical test of the hierarchical formation paradigm but ultimately also provides new clues on the complex interplay between star formation the cooling and heating of gas and galaxy merging processes This book reviews current techniques to measure the baryonic stellar and dark masses of nearby galaxies and focusses on ongoing attempts to measure theses same quantities in galaxies at higher and higher redshifts It also gives room to future perspectives with special emphasis on new survey projects and satellite missions

Science Perspectives for 3D

Spectroscopy Markus Kissler-Patig, Jeremy Walsh, Martin M. Roth, 2007-12-03 You will hold in your hands the proceedings of the last conference ever on integral eld spectroscopy So the daring statement that we organizers made at the end of an extremely interesting and busy week of conference in October 2005 Indeed the quality and diversity of the contributions in this book indicated that integral eld spectroscopy had evolved into a mature technique Future books would not be dedicated to the technique as such but to the science achieved with 3D spectroscopy that is a dedicated book after this one assembling science results across so many elds is unlikely to appear again or have you seen a proceeding dedicated to long lit spectroscopy recently In a sense this is very encouraging The idea of this conference was an o

springoftheResearchandTrainingNetwork RTN Euro3D sponsored by the European Commission The goal of this network was to promote integral field spectroscopy from an technique for experts to a common user utility for astronomical research When we first talked about this conference the VLT for example was not yet equipped with any integral field spectrograph We were wondering whether anyone would actually attend the conference in 4 years time and would have anything to report upon We were rewarded for our optimism and very positively surprised about the progress made in the years after that A progress of course driven by the advent of so many integral field spectrographs around the world installed on 4m to 8 10m class telescopes Many of these instruments are referred to in the present book Yet this is explicitly not a book dedicated to technical issues but focusing on the science Thus the name of the conference Science Perspectives for 3D Spectroscopy

Groups of Galaxies in the Nearby Universe Ivo Saviane,Valentin D. Ivanov,Jordanka Borissova,2007-08-01 For every galaxy in the field or in clusters there are about three galaxies in groups The Milky Way itself resides in a group and groups can be found at high redshift The current generation of 10 m class telescopes and space facilities allows the observation of the members of nearby groups with exquisite detail and their properties can be correlated with the global properties of their host group Groups in the local Universe offer us the chance to study galaxies in environments characterized by strong interactions In the cosmological context groups trace large scale structures better than clusters and the evolution of groups and clusters appears to be related All these aspects of research on groups of galaxies are summarized in this book written by scientists working in various fields

Data Journeys in the Sciences Sabina Leonelli,Niccolò Tempini,2020-06-29 This groundbreaking open access volume analyses and compares data practices across several fields through the analysis of specific cases of data journeys It brings together leading scholars in the philosophy history and social studies of science to achieve two goals tracking the travel of data across different spaces times and domains of research practice and documenting how such journeys affect the use of data as evidence and the knowledge being produced The volume captures the opportunities challenges and concerns involved in making data move from the sites in which they are originally produced to sites where they can be integrated with other data analysed and re used for a variety of purposes The in depth study of data journeys provides the necessary ground to examine disciplinary geographical and historical differences and similarities in data management processing and interpretation thus identifying the key conditions of possibility for the widespread data sharing associated with Big and Open Data The chapters are ordered in sections that broadly correspond to different stages of the journeys of data from their generation to the legitimisation of their use for specific purposes Additionally the preface to the volume provides a variety of alternative roadmaps aimed to serve the different interests and entry points of readers and the
