The fuel consumption and greenhouse gas emissions of MHDVs have become a focus of legislative and regulatory action in the past few years. This study is a follow on to the National Research Council's 2010 report *Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy Duty Vehicles*. That report provided a series of findings and recommendations on the development of regulations for reducing fuel consumption of MHDVs. On September 15 2011 NHTSA and EPA finalized joint Phase I rules to establish a comprehensive Heavy Duty National Program to reduce greenhouse gas emissions and fuel consumption for on road medium and heavy duty vehicles. As NHTSA and EPA began working on a second round of standards the National Academies issued another report *Reducing the Fuel Consumption and Greenhouse Gas Emissions of Medium and Heavy Duty Vehicles Phase Two First Report* providing recommendations for the Phase II standards. This third and final report focuses on a possible third phase of regulations to be promulgated by these agencies in the next decade.

Bange, JT Baker, PJ Bauer, KJ Broughton, GA Constable, Q Luo, DM Oosterhuis, Y Osanai, P Payton, DT Tissue, KR Reddy, BK Singh, 2016-03-02 Throughout the world, cotton is broadly adapted to growing in temperate, sub-tropical and tropical environments but growth may be challenged by future climate change. Production may be directly affected by changes in crop photosynthesis and water use due to rising CO₂ and changes in regional temperature patterns. Indirect effects may result from a range of government regulations aimed at climate change mitigation. While there is certainty that future climate change will impact cotton production systems, there will be opportunities to adapt. This review begins to provide details for the formation of robust frameworks to evaluate the impact of projected climatic changes, highlight the risks and opportunities with adaptation and details the approaches for investment in research. Ultimately, it is a multi-faceted systems based approach that combines all elements of the cropping system that will provide the best insurance to harness the change that is occurring and best allow cotton industries worldwide to adapt. Given that there will be no single solution for all of the challenges raised by climate change and variability, the best adaptation strategy for industry will be to develop more resilient systems. Early implementation of adaptation strategies, particularly in regard to enhancing resilience, has the potential to significantly reduce the negative impacts of climate change now and in the future. *Handbook of International*
