Tappan,2015-06-25 Excerpt from *Treatise on Geometry and Trigonometry* For Colleges Schools and Private Students The science of Elementary Geometry after remaining nearly stationary for two thousand years has for a century past been making decided progress This is owing mainly to two causes discoveries in the higher mathematics have thrown new light upon the elements of the science and the demands of schools in all enlightened nations have called out many works by able mathematicians and skillful teachers Professor Hayward of Harvard University as early as 1825 defined parallel lines as lines having the same direction Euclid s definitions of a straight line of an angle and of a plane were based on the idea of direction which is indeed the

essence of form This thought employed in all these leading definitions adds clearness to the science and simplicity to the study In the present work it is sought to combine these ideas with the best methods and latest discoveries in the science By careful arrangement of topics the theory of each class of figures is given in uninterrupted connection No attempt is made to exclude any method of demonstration but rather to present examples of all About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
