Verify Clairaut's Theorem ($f_{xy} = f_{yx}$) for this function.

$$f_x = \frac{\partial f}{\partial x} = y^{-1}$$

$$f_y = \frac{\partial f}{\partial y} = -x \cdot y^{-2}$$

$$f_{xx} = \frac{\partial}{\partial x} \left(\frac{\partial f}{\partial x} \right) \\ = \frac{\partial^2 f}{\partial x^2} = 0$$

$$f_{xy} = \frac{\partial}{\partial y} \left(\frac{\partial f}{\partial x} \right) \\ \frac{\partial}{\partial y} (y^{-1}) = -1 \cdot y^{-2} \\ = -y^{-2}$$

$$f_{yx} = \frac{\partial}{\partial x} \left(\frac{\partial f}{\partial y} \right) \\ \frac{\partial}{\partial x} (-x \cdot y^{-2}) \\ = -y^{-2}$$
$$f_{yy} =$$

Geophysical Data Analysis: Understanding Inverse Problem Theory and Practice Max A. Meju, 1994 Geophysical data analysis is a very practical subject and this book is intended to be a simple guide to the techniques of parameter estimation and error analysis I have placed emphasis on the reconciliation of theory and practical data to enable the reader understand how to tackle typical problems in data analysis It is hoped that a mastery of the simple techniques described in this book will inspire confidence in the reader to consult the more classical treatment of the subject It is pertinent to mention that this book developed out of a highly successful course of the same title given to senior undergraduate geophysics students in Leicester University since 1988 and its popularity stems from the structured learning programs and the simple effective practical approach to geophysical inversion The course is given in the first semester to provide students with the basic tools for quantitative analysis of geoscientific data and consists of 10 lectures and practical sessions involving the materials given in Chapters 1 to 9 in this book Chapter 10 derives from topical issues of research interest to me and my induction courses for postgraduate students in geophysics and the industry The contents of this book are easily digestible and require little statistical or mathematical commitment

Derivative Securities and Difference Methods You-lan Zhu, Xiaonan Wu, Li-Liang Chern, 2013-03-09 In the past three decades great progress has been made in the theory and practice of financial derivative securities Now huge volumes of financial derivative securities are traded on the market every day This causes a big demand for experts who know how to price financial derivative securities This book is designed as a textbook for graduate students in a mathematical finance program and as a reference book for the people who already work in this field We hope that a person who has studied this book and who knows how to write codes for engineering computation can handle the business of providing efficient derivative pricing codes In order for this book to be used by various people the prerequisites to study the majority of this book are multivariable calculus linear algebra and basic probability and statistics In this book the determination of the prices of financial derivative securities is reduced to solving partial differential equation problems i.e. a PDE approach is adopted in order to find the price of a derivative security This book is divided into two parts In the first part we discuss how to establish the corresponding partial differential equations and find the final and necessary boundary conditions for a specific derivative product If possible we derive its explicit solution and describe some properties of the solution In many cases no explicit solution has been found so far
