Hristea,2012-11-07 This book presents recent advances from 2008 to 2012 concerning use of the Na ve Bayes model in unsupervised word sense disambiguation WSD While WSD in general has a number of important applications in various fields of artificial intelligence information retrieval text processing machine translation message understanding man machine communication etc unsupervised WSD is considered important because it is language independent and does not require previously annotated corpora The Na ve Bayes model has been widely used in supervised WSD but its use in unsupervised WSD has led to more modest disambiguation results and has been less frequent It seems that the potential of this statistical model with respect to unsupervised WSD continues to remain insufficiently explored The present book contends that the Na ve Bayes model needs to be fed knowledge in order to perform well as a clustering technique for unsupervised WSD and examines three entirely different sources of such knowledge for feature selection WordNet dependency relations and web N grams WSD with an underlying Na ve Bayes model is ultimately positioned on the border between unsupervised and knowledge based techniques The benefits of feeding knowledge of various natures to a knowledge lean algorithm for unsupervised WSD that uses the Na ve Bayes model as clustering technique are clearly highlighted The discussion shows that the Na ve Bayes model still holds promise for the open problem of unsupervised WSD
