Ross,2012-12-06 It has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events It is not that the facts of history have changed No one will dispute that the battle of

Waterloo occurred on June 11 1815 or that the allied invasion of Europe began on June 6 1944 What each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation By examining the facts of history from a new perspective today's historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals Although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the goal of the management scientist like the historian is to merge the facts and figures of the discipline with today's organizational cultural and economic realities Hopefully the result will be a new synthesis where a whole new perspective will break forth exposing new directions and opportunities

Distribution Planning and Control David F. Ross, 2011-06-27 When work began on the first volume of this text in 1992 the science of distribution management was still very much a backwater of general management and academic thought While most of the body of knowledge associated with calculating EOQs fair shares inventory deployment productivity curves and other operations management techniques had long been solidly established new thinking about distribution management had taken a definite back seat to the then dominant interest in Lean thinking quality management and business process reengineering and their impact on manufacturing and service organizations For the most part discussion relating to the distribution function centered on a fairly recent concept called Logistics Management But despite talk of how logistics could be used to integrate internal and external business functions and even be considered a source of competitive advantage on its own most of the focus remained on how companies could utilize operations

management techniques to optimize the traditional day to day shipping and receiving functions in order to achieve cost containment and customer fulfillment objectives In the end distribution management was for the most part still considered a dreary science concerned with transportation rates and cost trade offs expediting and the tedious calculus Today the science of distribution has become perhaps one of the most important and exciting disciplines in the management of business

Implementing a Data Warehouse Bruce Russell Ullrey, 2007 The purpose of this book is to document the methodology and chronology of work activity used by the author to successfully implement a Data Warehouse Each of the eleven steps of the methodology is reviewed in the book often using actual working documents as examples The book contains lessons learned both good and bad as well as measures of success for each step An essential aspect of DW project implementation and other IT projects as well is using established business practices to manage development and implementation Discussion of use of these due diligence practices in Step 1 establishes the foundation for starting the DW project with the proper levels of management oversight Step 2 presents examples of business models necessary for the DW developer to understand the needs of the business that the DW will serve Other DW books describe the data modeling process but neglect to provide modeling instruction and actual examples to insure that the DW is properly aligned with business needs An elegant data warehouse that doesn't meet the needs of the business is wasted effort Step 3 documents and displays the level of detail needed to define CSFs Critical Success Factors and KPIs Key Performance Indicators If calculations for these important metrics are not defined in detail and consensus to use them is not reached then again the most elegant data warehouse implementation is a wasted effort In addition developing and documenting functional requirements is essential in identifying legacy system reporting deficiencies Step 4 describes how to access and display field level information on the iSeries platform Actual shots of the resulting screens are shown Step 5 presents the functional contents of an RFP for a Data Warehousing tool set Step 6 presents the progression of work required to build a data warehouse Step 6 also Describes and displays a hybrid dimensional to flat file data model that may be in reality the best data organizational model for a typical data warehouse Also a table is included showing examples of data file field cryptic names and their corresponding metadata name
