Water Centric Sustainable Communities Vladimir Novotny, Jack Ahern, Paul Brown, 2010-10-12 The current literature compartmentalizes the complex issue of water and wastewater into its discrete components technology planning policy construction economics etc Considered from the perspective of sustainability however water in the urban environment must be approached as a single resource that can be continuously reused and recycled This book will be the first to capture all of the current work on this idea in a single integrated plan for designing the water centric cities of the future From new construction to the retrofitting of existing systems this book presents the case for a new urban relationship to water one with a more sustainable connection to the environment and the hydrological cycle Through case studies of successfully planned and built systems around the world the book will educate the reader about the

need for a new approach to urban water management and make the case that these changes are not only possible but imperative

2nd IWA Leading-Edge on Sustainability in Water-Limited Environments M. B. Beck, A. Speers, 2006-03-31 This book represents the outcome of the Second IWA Leading Edge Conference held in Sydney Australia in November 2004 Sustainability is a paradoxical concept We know we want to protect the environment from human induced change yet ecosystems are dynamic constantly changing and adapting in response to a multitude of factors the combined effect and subtleties of which are probably well beyond human calculation Furthermore our conscious desire to protect the environment which forces us to think of humans as sitting outside ecosystems conflicts with the unavoidable fact that we are an unconscious actor within those ecosystems We must also recognise that the goal of protecting the environment is not a clear cut objective Perhaps because of its complexity and propensity to change we cannot know what the fully protected environment would look like Individual preferences too make the conceptualisation of an ideal state impossible do we strive for an ecosystem in which we play a minor part barely influencing natural outcomes or one that is more actively managed and provides for our needs or wants Neither this volume nor the conference from which it draws resolve the paradoxes described above The papers presented here do however provide insight into the innovative thinking and practical projects undertaken across the globe that move us from patently unsustainable conditions to those in which our economic activity impact on ecosystems and desire for positive social outcomes are in better balance

Water, Wastewater, and Stormwater Infrastructure Management Neil S. Grigg, 2012-06-08 Urban water services are building blocks for healthy cities and they require complex and expensive infrastructure systems Most of the infrastructure is out of sight and tends to be taken for granted but an infrastructure financing crisis looms in the United States because the systems are aging and falling behind on maintenance A road map for pu

Easy to build and manage, stabilization ponds can accommodate large fluctuations in flow and provide results that are

Aquatic Contamination Rouf Ahmad Bhat, Gowhar Hamid Dar, Fernanda Maria Policarpo Tonelli, Saima Hamid, 2023-09-26 Aquatic Contamination: Authoritative resource presenting techniques and technologies to sustainably neutralize environmental contamination in aquatic plants, microorganisms, and more. Two-thirds of the Earth is covered with aquatic habitats that play a key role in stabilizing the global environment and providing a wide variety of services to increasing human needs. Nevertheless, anthropogenic activities are rapidly destroying the quality of both fresh and marine waters globally due to excessive use of chemicals, fertilizers, and pollution from suburban and industrial areas, eventually making their way into the aquatic world. Aquatic Contamination: Tolerance and Bioremediation presents the broader spectrum of biological applicability of microbes with better understanding of cellular mechanisms for remediation of aquatic contaminants. The book also focuses on practices involved in molecular and genetic approaches necessary to achieve targets of bioremediation and phytoremediation to solve global water contamination problems. Such approaches pave the way for the utilization of biological assets to design new, efficient, and environmentally sound remediation strategies by inculcating genomic techniques at cellular and molecular levels with model assessment. Aquatic Contamination provides a comprehensive

background for readers interested in all perspectives of the contamination of aquatic environs. It covers various research aspects which are being carried out globally to understand simulation models in the assessment of xenobiotics, role of genomics, transgenic plants and microbial enzymes for degradation and removal of toxic substances in aquatic environs. Key features include: Extensive coverage of interactions between plants, metals and microbes including the influence of biotic and abiotic factors; Comprehensive discussion of the details of molecular mechanisms from assimilation to detoxification levels; Exploration of the enzymatic approaches of potential plants acting as hyper accumulators for contaminants in aquatic environs; Details of sustainable tools such as transgenic plants for the manipulation of important functional microbial genes to achieve higher certainty of bioremediation; Details of advances in tools and models like micro arrays and simulation models for the complete assessment of xenobiotic compounds from cellular to degradation hierarchies. Aquatic Contamination Tolerance and Bioremediation will be substantially helpful to environmentalists, microbiologists, biotechnologists and scientists providing essential information on various modern technologies for the remediation of contaminants in aquatic ecosystems.
