The Myth of the Global Market Giulio Palermo, 2024-11-06 Capitalism is often held to be the best of all possible worlds or even the only possible world in which the market is underpinned by the highest principles of rationality efficiency and compatibility with democracy These truths are backed up by economists a group who present themselves as impartial experts capable of operating independently of ideology or political intrusion This book questions these scientific truths It discusses the ideological foundations of neoliberalism and the value judgements often kept implicit in economic theory It analyses the claims of the key pillars of neoliberal economics the neoclassical and Austrian schools of economic thought and the myths which they propagate about markets It is shown that there is a deep division between the theoretical market the fair market the free market the market of equal opportunities the market as producer of wealth the market as a forum for discovering and sharing information and the reality This is not a simple problem of realism The problem also concerns the perfect market idealized by these theories which is subjected to criticism through a process of demystification that reveals the true ideological content hidden behind the market myths There have been various attempts by heterodox schools of economics to move beyond this flawed view of

the market. However, these have struggled to gain mainstream attention because of the cultural and political dominance of the neoliberal mindset which is claimed to be objective and neutral. Ultimately, the book argues that neoliberalism needs to be countered with an alternative based on a progressive decommodification of social relations to reduce the real and imagined significance of the market. This book is essential reading for those interested in Marxist political economy, heterodox economics, and critiques of neoliberalism, capitalism, and markets.

Regenerative Sanitation Thammarat Koottatep, Peter Emmanuel Cookey, Chongrak Polprasert, 2019-02-15. This book proposes Regenerative Sanitation as the next era of sanitation management and attempts to provide a foundation for the study of sanitation on the premise that sanitation is a complex and dynamic system that comprises of social, ecological, technological, and resource systems. The preconception is that sanitation will deliver maximal benefits to society only when there exists a cyclical integration of the three subsystems to enable appropriate linkages between technological design and the delivery platform so as to achieve optimal and sustained sanitation solutions. It also calls for the rethinking of sanitation to change the narrative towards more progressive trajectories such as resource recovery and reuse rather than just amelioration. It explores the contributions to food security, livelihood support, urban regeneration, rural development, and even local economies. A new paradigm theory and ten principles for ensuring practical and effective sanitation solutions and management is presented. In addition, is a unique conceptual framework applicable to both developed and developing countries and to all stages, processes, and cycles of delivering sanitation solutions that could critically evaluate, analyse, and provide credible, adequate, and appropriate sanitation solutions. All of which culminates in a strategic and practical application platform called Sanitation 4.0 that advocates for total rejuvenation and comprehensive overhaul with eight key strategic considerations for the implementation of Regenerative Sanitation. A New Paradigm For Sanitation 4.0 is inter- and trans-disciplinary and encourages collaboration between engineers, scientists, technologists, social scientists, and others to provide effective and practical, user-centred solutions. It includes relevant case studies, examples, exercises, and future research recommendations. It is written as both a textbook for researchers and students as well as a practitioners' guide for policymakers and professionals.
