

DATA TABLE

slope of velocity versus time = _____ (from Graph display)

acceleration (mean) = _____ (from Table display)

QUESTIONS

1. How does the slope of your velocity versus time plot compare to the accepted value of the acceleration of a free falling object ($g = 9.8 \text{ m/s}^2$)?
- Reminder: percent difference = $\left| \frac{\text{accepted value} - \text{experimental value}}{\text{accepted value}} \right| \times 100\%$
2. How does the mean of the acceleration from the table compare to the accepted value of the acceleration of a free falling object ($g = 9.8 \text{ m/s}^2$)?
3. What factors do you think may cause the experimental value to be different from the accepted value?

OPTIONAL

If time permits, repeat the data recording procedure several more times. Experiment with different methods for releasing the picket fence. Determine whether releasing the picket fence from just above the photogate or from several inches above the photogate makes any difference in the value of the acceleration. Note that the Table and Graph displays will show the most recently recorded run of data. To view a different run of data, click on the DATA menu () and select the data run you want from the list.
