The 19 revised full papers presented were carefully reviewed and selected from 33 submissions. The papers address various topics such as big data, database design, dynamics of information, information fusion, integrity and constraint management, intelligent agents, knowledge discovery and information retrieval, knowledge representation, reasoning and planning logics in databases and AI, mathematical foundations, security in information and knowledge systems, semi-structured data and XML, social computing, the semantic web and knowledge management and the world wide web. **Bayesian and Frequentist Regression Methods** Jon Wakefield, 2013-01-04 Bayesian and Frequentist Regression Methods provides a modern account of both Bayesian and frequentist methods of regression analysis. Many texts cover one or the other of the approaches but this is the most comprehensive combination of Bayesian and frequentist methods that exists in one place. The two philosophical approaches to regression methodology are featured here as complementary techniques with theory and data analysis providing supplementary components of the discussion. In particular, methods are illustrated using a variety of data sets. The majority of the data sets are drawn from biostatistics but the techniques are generalizable to a wide range of other disciplines. **Commerce Business Daily**, 1997-12-31
