

Effects of global warming

The signs of global warming are everywhere, and are more complex than just climbing temperatures.

1/ Scientists have documented these impacts of climate change yet :

Ice is melting worldwide, especially at the Earth's poles. This includes mountain glaciers, ice sheets covering West Antarctica and Greenland, and Arctic sea ice. The number of glaciers has declined to fewer than 30 from more than 150 in 1910.

Much of this melting ice contributes to sea-level rise and the rise is occurring at a faster rate in recent years.

Rising temperatures are affecting wildlife and their habitats. Vanishing ice has always challenged species and some populations have already collapsed.

As temperatures change, many species are on the move. Some butterflies, foxes, fish have migrated farther north or to higher, cooler areas.

Precipitation (rain and snowfall) has increased across the globe, on average, but it hasn't been enough. Indeed, some regions are experiencing more severe drought, increasing the risk of wildfires, lost crops, and drinking water shortages.

Some insect species have already devastated millions of forested acres all around the world. We haven't already faced enough disasters, have we ?

2/ Other effects could take place later this century, if warming continues. These include:

Sea levels are expected to rise between 10 and 32 inches (26 and 82 centimeters) or higher by the end of the century. Nonetheless freshwater will be less available, since glaciers store about three-quarters of the world's freshwater.

Hurricanes and other storms are likely to become stronger. Floods and droughts will become more common. Large parts of the U.S., for example, face a higher risk of decades-long "megadroughts" by 2100.

Some diseases will spread, such as mosquito-borne malaria and will more dangerous.

Ecosystems will continue to change: Some species will move further north or become more successful; others, such as polar bears, won't be able to adapt and could become extinct.

What have we done to our planet?
