Standards CCSS are the first academic standards to be independently adopted by almost every state in the country. The purpose and intent of the Common Core standards for English Language Arts (ELA) as well as Literacy in History, Social Studies, and Science Education are the focus of this book. Each of the chapters addresses one of the major English Language Arts domains: literature, informational texts, foundational skills, writing, speaking, and listening, language technology, and assessment. The objective of the chapters is twofold: to provide a theoretical background and detailed explanation of each of the CCSS ELA standards as well as practical suggestions, classroom vignettes, models, instructional resources, and unit ideas to implement the standards.

New Trends in Earth-Science Outreach and Engagement Jeanette L. Drake, Yekaterina Y. Kontar, Gwynne S. Rife, 2013-12-11. Perhaps just as perplexing as the biggest issues at the core of Earth science is the nature of communicating about nature itself. *New Trends in Earth Science Outreach and Engagement: The Nature of Communication* examines the processes of communication necessary in bridging the chasm between climate change and natural hazard knowledge and public opinion and policy. At this junction of science and society, 17 chapters take a proactive and prescriptive approach to communicating with the public, the media, and policy makers about the importance of Earth science in everyday life. Book chapters come from some 40 authors who are geophysical scientists, social scientists, educators, scholars, and professionals in the field. Bringing diverse perspectives, these authors hail from universities and research institutes, government agencies, non-profit associations, and corporations. They represent multiple disciplines including geosciences, education, climate science, education, environmental communication, and public policy. They come from across the United States and around the world. Arranged into five sections, the book looks at geosciences communication in terms of: 1. Education, 2. Risk management, 3. Public discourse, 4. Engaging the public, 5. New media. From case studies and best practices to field work and innovations, experts deliver pragmatic solutions and delve into significant theories including diffusion, argumentation, and constructivism, to name a few. Intended for environmental professionals, researchers, and educators in the geophysical and social sciences, the book emphasizes communication principles and practices within an up-to-the-minute context of new environmental issues, new technologies, and a new focus on resiliency.

Environmental and Energy Efficiency Evaluation Based on Data Envelopment Analysis (DEA) Ramon Sala-Garrido, María Molinos-Senante, 2021-05-06. Efficiency and productivity assessment are essential to ensure the long-term financial sustainability of countries' services and processes. In the last few years, there has been an increasing interest in the environmental effects of economic activities, and the need to assess the environmental and energy efficiency has been internationally recognized. Energy and environmental efficiency assessments of decision-making units (DMUs) such as countries, utilities, processes, and services are relevant and have strong implications for companies, regulators, stakeholders, policy makers, and customers. To improve both the decision-making process and the management of DMUs, fundamental and practical knowledge about energy and environmental efficiency and productivity is essential.
