### What is Occupational Therapy? Pediatric Edition

#### What is Occupational Therapy?

- Occupational Therapy helps people of all ages and abilities succeed in their daily "occupations," which are the things that occupy their time. In Pediatrics, these daily activities can be anything that the child participates in, including play, feeding, dressing, sleep, grooming, toileting, daycare, school, and anything else in their routine.

#### Who performs my child's Occupational Therapy?

- Your child will always be initially evaluated by a Licensed Occupational Therapist to determine their plan of care and goals to be addressed. A Licensed Occupational Therapist (OT) has a Master's or Doctorate Degree specifically in how to evaluate and treat in Occupational Therapy. Your child may be treated by either an OT or by a COTA (Certified Occupational Therapy Assistant). A COTA has an Associate's or Bachelor's Degree specifically for treatments in Occupational Therapy. Both OTs and COTAs will be able to assist you with the adaptations and strategies your child needs throughout the sessions.

#### What areas of development do Occupational Therapy Practitioners address?

- In Pediatrics, Occupational Therapy can address your child's fine motor skills and strength, object manipulation skills, visual-motor skills, hand-eye coordination, sensory processing difficulties, feeding, cognitive skills, self-care skills, and social difficulties. However, this can vary depending on your facility's agency and your practitioner's specific training. Ask your OT Practitioner for more
