CGI Programming with Perl Scott Guelich, Shishir Gundavaram, Gunther Birznies, 2000-06-29 Programming on the Web today can involve any of several technologies but the Common Gateway Interface CGI has held its ground as the most mature method and one of the most powerful ones of providing dynamic web content CGI is a generic interface for calling external programs to crunch numbers query databases generate customized graphics or perform any other server side task There was a time when CGI was the only game in town for server side programming today although we have ASP PHP Java servlets and ColdFusion among others CGI continues to be the most ubiquitous server side technology on the Web CGI programs can be written in any

programming language but Perl is by far the most popular language for CGI. Initially developed over a decade ago for text processing, Perl has evolved into a powerful object-oriented language while retaining its simplicity of use. CGI programmers appreciate Perl's text manipulation features and its CGI.pm module which gives a well-integrated object-oriented interface to practically all CGI-related tasks. While other languages might be more elegant or more efficient, Perl is still considered the primary language for CGI.

CGI Programming with Perl Second Edition offers a comprehensive explanation of using CGI to serve dynamic web content. Based on the best-selling CGI Programming on the World Wide Web, this edition has been completely rewritten to demonstrate current techniques available with the CGI.pm module and the latest versions of Perl. The book starts at the beginning by explaining how CGI works and then moves swiftly into the subtle details of developing CGI programs. Topics include: Incorporating JavaScript for form validation, Controlling browser caching, Making CGI scripts secure in Perl, Working with databases, Creating simple search engines, Maintaining state between multiple sessions, Generating graphics dynamically, Improving performance of your CGI scripts.

Oracle PL/SQL Built-ins Pocket Reference Steven Feuerstein, John Beresniewicz, Chip Dawes, 1998 This pocket reference provides quick reference information that will help you use Oracle Corporation's extensive set of built-in functions and packages, including those new to Oracle8. Oracle's PL/SQL language is a programming language providing procedural extensions to the SQL relational database language and to an ever-growing number of Oracle development tools. Among the most useful constructs in the PL/SQL language are the built-in functions and packages. Built-in functions are constructs that operate on certain types of data, e.g., numeric, character, to return a result. By using functions, you can minimize the coding you need to do in your programs. Functions are described in detail in Steven Feuerstein's Oracle PL/SQL Programming. This comprehensive guide to building applications with PL/SQL has become the bible for PL/SQL developers who have raved about its completeness, readability, and practicality. Built-in functions fall into

several major categories

- Character functions** Operate on character data Examples include CONCAT concatenates two strings into one LENGTH returns the length of a string and REPLACE replaces a character sequence in a string with a different set of characters
- Date functions** Operate on dates and supplement the DATE datatype Examples include SYSDATE returns the current date and time in the Oracle Server and LAST_DAY returns the last day in the month of the specified date
- Numeric functions** Operate on numeric data Examples include CEIL returns the smallest integer greater than or equal to the specified number and POWER returns a number raised to a particular power
- LOB functions** Operate on large object data Examples include EMPTY_BLOB returns an empty locator of the binary large object type and EMPTY_CLOB returns an empty locator of the character large object type
- Conversion functions** Perform explicit conversions of different types of data Examples include TO_CHAR converts a number or date to a string and TO_NUMBER converts a string to a number
- Miscellaneous functions** Examples include GREATEST returns the greatest of the specified list of values and UID returns the user ID of the current Oracle session

Built in packages collections of PL SQL objects such as functions procedures and data structures greatly expand the scope of the PL SQL language These packages are described in detail in Feuerstein s and Beresniewicz s book

Oracle Built in Packages Built in packages are built by Oracle Corporation and stored directly in the Oracle database The functionality of the built ins is available from any programming environment that can call PL SQL stored procedures including Visual Basic Oracle Developer 2000 Oracle Application Server for Web based development and of course the Oracle database itself

Built in packages extend the capabilities and power of PL SQL in many significant ways For example DBMS_SQL executes dynamically constructed SQL statements and PL SQL blocks of code DBMS_PIPE communicates between different Oracle sessions through a pipe in the RDBMS shared memory DBMS_JOB submits and manages regularly scheduled jobs for execution inside the database DBMS_LOB accesses and manipulates Oracle8 s large objects LOBs from within PL SQL programs The book shows how to call all of the commonly used built in functions and packages For packages it also shows the RESTRICT REFERENCES pragmas needed if you call packages from a SQL statement as well as the exceptions constants and data structures defined in the packages
