

Scientific Article Summary

During the course of the semester you will be required to write three article summaries. This is intended to help you learn to synthesize scientific materials and communicate the main points effectively, using plain language without too much scientific jargon.

The topics are as follows:

Summary: #1- Animal Ecology; #2- Plant Ecology; #3- Your choice!

The Assignment

After graduating Xavier you have become a famous scientific writer for the Cincinnati Enquirer. You are not there yet but this exercise will give you some practice!

Your job is to summarize a recent *primary* research article on ecology (within the last 5 years). *primary* research article so no literature reviews or book chapters allowed! Your editor (me) has restricted your piece to three pages in length. This assignment requires you to condense a highly technical research article for the general public. Assume you are writing for the local newspaper.

Writing the paper:

The article summary must be **sent to me through e-mail** in Microsoft word format. It should be **2-3 pages** long, double-spaced with 12 pt font. Begin the summary by giving the full citation of the article. Then, below, write a clear and concise summary of the paper. This requires you to boil down a complex research paper to its essential content and significance (but this is your job as a scientific writer!).

You are writing for the general public. This means you must define terms and set up the reader with necessary background material. All of the writing must be your own. **Do not** quote sections of the article or cite other sources. In your summary, include at least a paragraph (more if necessary) on each of the following topics:

Introduction:

- Discuss the basic ecological concept or research question that was addressed by the study, briefly discuss what was known about this concept or question at the initiation of the study (before the research was done).
- This section is critical to the review since most readers will not be knowledgeable enough to understand the reason why the study was done or the significance of the results that follow.
