word

I am Rose Marilyn . Mianes, just call me Rose. I'm 20 years old and born on the 31th day of May, year 1991. I am the 3rd child among the 3 children of my parents. We live in 200 Kalayaan St. Tatalon Quezon City.

I am a 1st year college student of BS Information Technology in System Technology Institute. Dealing with my likes and dislikes: To persons I am usually with or even those I actually don't know who they are, I enjoy company with traits like mine. What matter is I could reflect myself to them. I love friends who also love me. On the other hand, I despise persons who are insensitive (though sometimes, I am one). I hate those who can't appreciate things. I get really emotional whenever this happens.

High School Experience

They say High School Life is the happiest moment of one's life. Maybe because this is the time where you will experience all one's "first".... and I supposed you know what does this "first" means. First love, first heartbreak, first kiss? First lakwat, gimmick or outing with friends, first crush, or the first time of having guts to say I love you to someone, or maybe finding your 1st true friends. wow...

I attended my Secondary Education in San Jacinto National High School. There were lots of memories and I could not tell you much of it that would take me 3 hours or more to tell you the experiences I've been. I thought High school would be same as what I was in Elementary. Me and my friends used to play after school then go home by 3 pm, do our assignments, watch TV, sleep, wake up and go to school again... The normal cycle of studying. But what makes Elementary and High School differ is the weight of maturity and realization that the matter of study now in High school is above-heavier than elementary and should take it seriously. coz what happens to you in this stage would reflect on how and what more you can and cannot do on your future years.

My 2nd year was the most embarrassing part of my High School years. I remember when... [\[continued\]](#)

**Active Learning in College Science** Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman's challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naive notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
