Research in Education ,1974 **Sources for a Better Education** Piet Kommers,2022-02-22 This textbook evolves from the intersection between Research Educational Information Technologies and recent Best Practices It offers diplomacy and erudite rhetoric in order to harvest from innovation projects and see how new professional needs for teachers are emerging day by day The volume launches the compact background for the 21st century education that every teacher faces after being in charge for 3 or 6 years after pre service training Sources for a better education refers to the deep understanding and to the incentives for encouraging teachers to leave the comfort zone and experiment the next steps into a further sophisticated professionalism without the threat of feeling in a Dilemma The first candidate for extending one s teaching effectiveness is to tailor one s teaching to the test to be expected Teaching to the Test is an understandable tactic however it endangers the students full understanding of underlying concepts and analogies The second candidate for professionalism is the deeper layer of knowledge on how curricular domains are related In simpler terms better teachers know how to bridge topics and subjects so that students develop a deeper understanding on the patterns and structure in knowledge The 21st century education prioritizes higher degrees of flexible divergent and abstract thinking so that creative problem solving comes into reach ICT tools for making prior knowledge explicit is a major example on how learners harvest upon prior knowledge thinking and intuition The third source for a better education is the courage to envisage one s meta

knowledge in order to see patterns in learning and understanding The more conscious prior knowledge gets decompiled into genetic metaphors the better future learning can be anticipated The fourth asset for meta cognitive skills is the wide spectrum of tools that the web offers for building knowledge infra structures so that knowledge becomes transformed into problem solving skills the availability of knowledge is no longer sufficient for finding creative and authentic solutions in future situations This is the case for both students and teachers By tradition the bottom up strategy from reproductive factual learning up to the levels of problem solving and creative thinking has been favoured The one click away access to information on the web asks a more strategic attitude from learners and practitioners to cope with the periphery between known and unknown so that a more effective meta cognition develops The fifth stimulus for more effective learning is the expanding impact of social media Social media tend to intimidate learners with incomplete understanding to jump on biases as delivered through political and conspiracy agendas This books aims at the challenge to build upon learners existential needs and developing interest for a longer term learning perspective Renaissance man and philosopher Piet Kommers presents us with an interesting question What makes education exciting His book covers a range of lessons learnt through research and practice covering philosophies and paradoxes ranging from learning to learn to machine learning for learning In 35 chapters he takes us on an exciting comprehensive journey of just about every conceivable aspect of technology and education This is a must have for every 21st Century bookshelf By Johannes Cronj professor of Digital Teaching and Learning in the Department of Information Technology at the Cape Peninsula University of Technology South Africa Piet Kommers has in 400 pages provided an overview of teaching based on practical experience It is not a summary of pedagogic models but a guide to important factors in how to motivate students and thus improve their learning New technologies changes teaching and we need to understand how application of such technologies can improve the learning This book provides such knowledge and I wish I had it when I started teaching at university many years ago By Jan Frick Professor Business School University of Stavanger Norway Piet Kommers delivers a very thorough book with a holistic perspective on Learning Technologies This book is a result of many years of experience that the author has in Higher Education It comprises lessons learned from the author s professional career including inputs from European Union research projects as well as diversified interactions with a wide range of Peoples and Cultures The result is a unique perspective that is a must read for anyone interested in Learning Technologies past present and future By Pedro Isaias associate professor at the Information Systems Technology Management School of The University of New South Wales UNSW Sydney Australia Distinguished Professor and Thinker Dr Piet Kommers presents the academic community with a new horizon on education that reflects the current and future technology trends in the e Learning and Fast Internet ubiquity The Book discusses the current and most recent advances in research and application of most effective learning methods in conjunction with the future directions in machine learning in support of learning The Book s 35 chapters present cutting edge technologies and state of the art learning methods in

Regions and Economic Resilience Raul Ramos, Matías Mayor, 2020-12-14

The term resilience originated in environmental studies and describes one's biological capacity to adapt and thrive under adverse environmental conditions. Regional economic resilience is defined as the capacity of a territory's economy to resist and/or recover quickly from external shocks, often even improving on its prior situation before the shock. The contributions in this book analyse different channels related to processes of mitigation, resistance, recovery and adaptive resilience, reorientation, renewal in a wide variety of geographical settings and scales. While the different chapters include relevant methodological advances in this literature, they also obtain relevant results from a policy perspective. Moreover, the wide spectrum of topics and analyses among the contributions in this book extend the current framework to analyse regional economic resilience from the intersection of several disciplines involving geographers, economists and demographers as well as environmental scientists.
