Network Protocol Design with Machiavellian Robustness Brett Keith Watson, 2010-11-14 This thesis is on the subject of network protocol design It takes a collection of known practical problems that we face on the Internet namely abuses of the network and considers these problems in light of both existing practical countermeasures and abstract analysis Protocol design features and techniques with Machiavellian robustness are then proposed to address these problems to the extent that such a remedy is possible A protocol called Invite is then designed from scratch using these new techniques The Invite protocol thus serves as a practical example of design for Machiavellian robustness but its duty as a protocol is to convey that robustness to some other protocol so it is then applied to email and its well known abuses such as spamming and mailbombing In that context its effectiveness is analysed and compared with other approaches both proposed and currently practised Lastly the broader implications of Machiavellian robustness are considered suggesting possible avenues of future research

Security for Web Services and Service-Oriented Architectures Elisa Bertino, Lorenzo Martino, Federica Paci, Anna Squicciarini, 2009-10-22 Web services technologies are advancing fast and being extensively deployed in many different application environments Web services based on the eXtensible Markup Language XML the Simple Object Access Protocol SOAP and related standards and deployed in Service Oriented Architectures SOAs are the key to Web based interoperability for applications within and across organizations Furthermore they are making it possible to deploy applications that can be directly used by people and thus making the Web a rich and powerful social interaction medium The term Web 2.0 has been coined to embrace all those new collaborative applications and to indicate a new social approach to generating and distributing Web content characterized by open communication decentralization of authority and freedom to share and reuse For Web services technologies to hold their promise it is crucial that security of services and their interactions with users be assured Confidentiality integrity availability and digital identity management are all required People need to be assured that their interactions

with services over the Web are kept confidential and the privacy of their personal information is preserved People need to be sure that information they use for looking up and selecting services is correct and its integrity is assured People want services to be available when needed They also require interactions to be convenient and personalized in addition to being private Addressing these requirements especially when dealing with open distributed applications is a formidable challenge
