[Stochastic Population Dynamics in Ecology and Conservation](#) Russell Lande, Steinar Engen, Bernt-Erik Sæther, 2003 All populations fluctuate stochastically creating a risk of extinction that does not exist in deterministic models with fundamental consequences for both pure and applied ecology This book provides the most comprehensive introduction to stochastic population dynamics combining classical background material with a variety of modern approaches including new and previously unpublished results by the authors illustrated with examples from bird and mammal populations and insect communities Demographic and environmental stochasticity are introduced with statistical methods for estimating them from field data The long run growth rate of a population is explained and extended to include age structure with both demographic and environmental stochasticity Diffusion approximations facilitate the analysis of extinction dynamics and the duration of the final decline Methods are developed for estimating delayed density dependence from population time series using life history data Metapopulation viability and the spatial scale of population fluctuations and extinction risk are analyzed Stochastic dynamics and statistical uncertainty in population parameters are incorporated in Population Viability Analysis and strategies for sustainable harvesting Statistics of species diversity measures and species abundance distributions are described with implications for rapid assessments of biodiversity and methods are developed for partitioning species diversity into additive components Analysis of the stochastic dynamics of a tropical butterfly community in space and time indicates that most of the variance in the species abundance distribution is due to ecological heterogeneity among species so that real communities are far from neutral [Population Dynamics and Laboratory Ecology](#) Robert Desharnais, 2005-08-04 Population Dynamics and Laboratory Ecology highlights the contributions laboratory studies are making to our understanding of the dynamics of ecological and evolutionary systems Chapters address the scientific rationale for laboratory ecology its historical role within the broader discipline and recent advances in research The book presents results from a wide range of laboratory systems including insects mites plankton protists and microbes A common theme throughout the

book is the value of microcosm studies in advancing our knowledge of ecological and evolutionary principles Each chapter is authored by scientists who are leading experts in their fields The book addresses fundamental questions that are of interest to biologists whether they work in the laboratory or field or whether they are primarily empiricists or theorists Details a scientific rationale for laboratory systems in ecological and evolutionary studies Offers a view on historical role of laboratory studies Includes examples of recent research advances in ecology and evolution using laboratory systems ranging from insects to microbes Integrates mathematics statistics and experimental studies Comprehensive Education For Class XII - JKBOSE Mohammad Iqbal Bhat,2025-08-29 This book Comprehensive Education for Class XII JKBOSE is designed to meet the evolving needs of learners in alignment with the National Education Policy NEP 2020 It presents a blend of theoretical foundations practical insights and application based learning strategies that will help students succeed academically while building essential life skills The content strictly follows the Jammu Kashmir Board of School Education JKBOSE syllabus while incorporating modern pedagogical perspectives Each chapter contains clear explanations illustrative examples summaries for quick revision and exercises to strengthen understanding and application *Fish Population Dynamics* J. A. Gulland,1988-11-17 This new edition provides updated information on population dynamics of major food fishes and reviews the various methods used to study quantitative impacts of fishing on fish stocks Contributors provide an historical background of the subject then go on to cover current theories and methods of stock assessment how these theories and methods have been applied in practice and the effects of fisheries management on fish populations They discuss length based methods of stock assessment multi species fisheries and provide data on fish populations in the North Atlantic the Irish Sea off Australia Southeast Asia and other regions Completely revised and updated including several new chapters *Disease Ecology* Sharon K. Collinge,Chris Ray,2006-01-26 Summary The chapters in this book llustrate aspects of community ecology that influence pathogen transmission rates and disease dynamics in a wide variety of study systems Ecology and Man in Mexico's Central Volcanoes Area G.W. Heil,Roland Bobbink,Nuri Trigo Boix,2012-12-06 The main activities of the economically active population around The Iztacc huatl and Popocat petl volcanoes region lie in the primary sector 65 90% Of the people working in this sector those dependent on agricultural or pastoral activities generally have an income significantly lower than the minimum wage in Mexico Of the activities in the area these agricultural pastoral and forestry activities probably have the most direct effect on the ecology of the volcanoes and its immediate surroundings Traditional farmers producing crops such as beans pumpkins and cucumbers generally work on small fields using traditional methods and animal traction Modern farming geared towards intensive production develops on larger sites making use of modern machinery fertilizers and pesticides As the area under agriculture continues to increase every year the attendant opening of large forested areas soil modification and ensuing erosion make it almost impossible for forest recovery Extensive forestry in the region mainly concerns cutting and collecting wood cutting Pinus branches for torches or for utensils for open fire cooking

collection of mushrooms and hunting Although these often clandestine activities seem to be small scale their adverse effects on the forest have been substantial Weekend visitors from Mexico City heavily dominate recreation with tourism concentrated near the roads leading to and inside the park Lacking organization and facilities most recreational activities have had significant environmental impact on the area In many countries the decline of nature has occurred because of changes in land use

Scaling in Ecology with a Model System Aaron M. Ellison, Nicholas J. Gotelli, 2021-08-03 A groundbreaking approach to scale and scaling in ecological theory and practice Scale is one of the most important concepts in ecology yet researchers often find it difficult to find ecological systems that lend themselves to its study Scaling in Ecology with a Model System synthesizes nearly three decades of research on the ecology of *Sarracenia purpurea* the northern pitcher plant showing how this carnivorous plant and its associated food web of microbes and macrobes can inform the challenging question of scaling in ecology Drawing on a wealth of findings from their pioneering lab and field experiments Aaron Ellison and Nicholas Gotelli reveal how the *Sarracenia* microecosystem has emerged as a model system for experimental ecology Ellison and Gotelli examine *Sarracenia* at a hierarchy of spatial scales individual pitchers within plants plants within bogs and bogs within landscapes and demonstrate how pitcher plants can serve as replicate miniature ecosystems that can be studied in wetlands throughout the United States and Canada They show how research on the *Sarracenia* microecosystem proceeds much more rapidly than studies of larger more slowly changing ecosystems such as forests grasslands lakes or streams which are more difficult to replicate and experimentally manipulate Scaling in Ecology with a Model System offers new insights into ecophysiology and stoichiometry demography extinction risk and species distribution models food webs and trophic dynamics and tipping points and regime shifts
