Reacting Flows G. S. S. Ludford, American Mathematical Society, 1986-12-31 These two volumes represent the culmination of the Special Year 84 85 in Reacting Flows held at Cornell University As the proceedings of the 1985 AMS SIAM Summer Seminar in Applied Mathematics the volumes focus on both mathematical and computational questions in combustion and chemical reactors They are addressed to researchers and graduate students in the theory of reacting flows Together they provide a sound basis and many incentives for future research especially in computational aspects of reacting flows Although the theory of reacting flows has developed rapidly researchers in the two subareas of combustion and chemical reactors have not communicated The main goal of this seminar was to synthesize the mathematical theory and bring it to the interface with large scale computing All of the papers have high research value but the first five introductory lectures should be especially noted

Chemical Reactions in Organic and Inorganic Constrained Systems R. Setton, 1986-02-28 The basic idea of the NATO International Exchange Program for funding an Advanced Research Workshop on Chemical Reactions in Organic and Inorganic Constrained Systems was to contribute to a better understanding of the influence of configurational constraints on reaction mechanisms as imposed on reagents by organic or inorganic templates The original character of the Workshop was to bring together organic and inorganic chemists with this common interest in order to promote the exchange of ideas and eventually interdisciplinary research All the participants to the Workshop agreed that the discussions were stimulating and fruitful The judgement of the reader of the Proceedings may perhaps be more restrictive because the director Professor J J FRIPIAT and co director Professor P SINAY faced with the impossible task of covering such an enormous domain were obliged to select somewhat arbitrarily a limited number of topics which seemed to them to be the most important Their choice may be discussed and there surely are important gaps with fields which were not considered However both organisers believe that within the limited span of time and number of contributors most of the exciting areas were addressed Dr WARNHEIM was kind enough to write a commentary on the Workshop his summary written with the hindsight of a few weeks supports we believe this opinion Dr SETTON has accepted the burden of collecting and shaping not selectively the manuscripts This book would not be what it is without his efficient contribution as scientific secretary of the Workshop

Biology and Control Theory: Current Challenges Isabelle Queinnec, Sophie Tarbouriech, Germain Garcia, Silviu-Iulian Niculescu, 2007-08-07 Creating some links between control feedback and biology modeling communities based on similarities in modeling observing and perceiving alive structures and analyzing interconnections between biological structures and subsystems was the main objective of this volume In this context biology systems need appropriate analysis tools due to their structure and hierarchy complexity and environment interference and

we believe that these aspects may generate interesting research topics in control area Indeed several works raising the potential impact of control developments to bring some beginning of answers in the context of biological systems have been published in the recent years The idea of this book was conceived in the context mentioned above with the objective to help in claiming many of the problems for control researchers starting discussions and opening interactive debates between the control and biology communities and finally to alert graduate students to the many interesting ideas at the frontier between control feedback theory and biology
