Monahan,2020-04-17 This book provides the reader with the a comprehensive summary of the recent advances in the study of whitecaps It is the first major publication focusing specifically on whitecaps and their role in a variety of climate relevant air sea interaction processes since the publication in 1986 of *Oceanic Whitecaps and Their Role in Air Sea Exchange Processes* edited by Edward Charles Monahan and Gearoid Mac Niocaill published by Springer This book also provides the interested reader with a review of the initial work done on this topic in the second half of the 20th Century

NASA and the Politics of Climate Research W. Henry Lambright,2023-10-09 Today there exists an integrated large scale satellite system to track sea level rise its speed causes and impacts Building it was a struggle every step of the way It was the most vivid and potentially consequential program within NASA s larger Earth Science directorate How did it happen Who did what Why This book seeks to answer such questions It goes back to the origins of NASA s interest in the oceans in the 1960s and first true ocean satellite Seasat in 1978 After three months of operation Seasat failed But before it did it showed how much satellites could tell about the ocean s dynamics In many ways sea level rise is the clearest and most understandable result of a warming planet

Estuarine Research, Monitoring, and Resource Protection Michael J. Kennish,2003-09-25 The ongoing growth of human populations within US coastal regions continues to increase habitat loss eutrophication organic loading overfishing and other anthropogenic stressors in estuarine waters The National Estuarine Research Reserve System NERRS is a federally funded initiative that addresses these critical estuarine problems and coastal resource issues at 25 sites in 21 states Now estuarine and watershed scientists resource managers community planners and other professionals dealing with coastal zone issues have an expert resource describing the NERRS program organization goals and management strategy *Estuarine Research Monitoring and Restoration* first defines the components and technical aspects of the NERRS program then provides valuable insight into the program through the presentation of six case studies of NERRS sites This book examines estuarine problems including degraded water quality reduction of biodiversity and problematic invasive species then analyzes the human impacts affecting estuaries The comprehensive analysis of the six estuarine reserve locations characterizes each region s physical chemical and biological conditions from the perspective of the NERRS program These

case studies include a cross section of sites from three coasts each study emphasizing the importance of unified efforts of government and citizens to successfully maintain the ecology of these critical areas *Invitation to Oceanography* Paul R. optical remote sensing technology for enhanced observations and detection of ocean environments. It provides extensive knowledge of physical principles and capabilities of optical observations of the oceans at high spatial resolution 1.4 m and on the observations of surface wave hydrodynamic processes. It also describes the implementation of spectral statistical and fusion algorithms for analyses of multispectral optical databases and establishes physics based criteria for detection of complex wave phenomena and hydrodynamic disturbances including assessment and management of optical databases. This book explains the physical principles of high resolution optical imagery of the ocean surface, discusses for the first time the capabilities of observing hydrodynamic processes and events and emphasizes the integration of optical measurements and enhanced data analysis. It also covers both the assessment and the interpretation of dynamic multispectral optical databases and includes applications for advanced studies and nonacoustic detection. This book is an invaluable resource for researchers, industry professionals, engineers and students working on cross disciplinary problems in ocean hydrodynamics, optical remote sensing of the ocean and sea surface remote sensing. Readers in the fields of geosciences and remote sensing, applied physics, oceanography, satellite observation technology and optical engineering will learn the theory and practice of optical interactions with the ocean.

Principles of Ocean Physics John R. Apel, 2013-10-22. In recent years significant advances in both the theoretical and observational sides of physical oceanography have allowed the ocean's physical behavior to be described more quantitatively. This book discusses the physical mechanisms and processes of the sea and will be valuable not only to oceanographers but also to physicists, graduate students and scientists working in dynamics or optics of the marine environment.

Organisms Amplify Diversity David Seaborg, 2023-06-30. This book presents a hypothesis and evidence that organisms promote and ecosystems maximize biodiversity. All species have a net positive effect on their environment, other species and diversity. The sun is 30% hotter than when life began but the temperature has been kept moderate by life. Life created high oxygen, the ozone layer and fertile soil, a diverse living system. No species evolves in isolation and most evolution is coevolution. The nature and number of links between species are as important as species number. Eukaryotes coevolve with complex ecosystems of microbes with which they exchange genes. Genomes and intraspecific interactions both act to promote evolution and diversification. Viruses increase diversity of their hosts and cause macroevolutionary transitions.

Key Features: Life alters the Earth in ways that increase biodiversity. All species make their environment better for other species and promote diversity. Life created the life friendly atmosphere, temperature and soil of today.

Petroleum Biodegradation and Oil Spill Bioremediation Karuna K. Arjoon, James G. Speight, 2022-12-22. The prime focus of the book is to determine the mechanism, extent and efficiency of biodegradation processes as it is necessary to know the composition of the original crude oil or crude oil product. The technology of bioremediation and the concerns of whether or not bioremediation technologies can accelerate this natural process enough to be considered practical and if so whether they might find a niche as replacements for or adjuncts to other crude oil spill response technologies. This book also introduces the reader to the

science of the composition of crude oil and crude oil products is at the core of understanding the chemistry of biodegradation and bioremediation processes

Physical Oceanography Processes at Eastern Boundary Upwelling Systems

Francisco Machin, Jose Gomez-Valdes, 2023-12-29 Eastern boundary upwelling systems EBUS have historically received attention from the scientific community due to their impact on the economic development of these highly productive systems Remote sensing numerical modeling and in situ observations have increased their spatial and temporal resolutions during the last 40 years in their strategy to provide reliable products about the actual state of the ocean The assembly of several data sources currently constitutes an opportunity to increase our knowledge about the present and future state of the relatively narrow and highly variable EBUS The primary forcing mechanism in the upwelling regions is the wind stress in areas close to the coast Long term trends in wind intensity in upwelling areas present considerable uncertainties as the different wind databases produce divergent results On the other hand although the effect of climate change in the interior ocean is increasing temperatures in upwelling areas the long term trends seem to be in the opposite direction Hence assessing the long term impact of the environmental conditions on upwelling development represents a major challenge for the scientific community This special issue aims to discuss the state of the art understanding of dynamical processes governing the ocean at the eastern boundary upwelling systems in a changing ocean
