Harrison, Syed Jaffar Hussain, 2015-06-12 The Practical Authoritative 360 Degree Technical Guide to Oracle Exadata From Setup to Administration Optimization Tuning and Troubleshooting The blazingly fast Oracle Exadata Database Machine is being embraced by thousands of large scale users worldwide by governments the military enterprise organizations cloud service providers and anyone who needs extreme performance Now Oracle Exadata Expert s Handbook provides authoritative guidance to running Oracle Exadata with maximum reliability effectiveness performance and efficiency Six renowned Oracle technology experts have brought together core technical information experience best practices and insider tips in a concise reference Covering both 11g and 12c versions of Oracle Exadata software they deliver hands on coverage of best practices setup migration monitoring administration performance tuning and troubleshooting Whether you re an Oracle Exadata DBA DMA architect or manager you need these insights Get a 360 degree overview of the Oracle Exadata Database Machine Efficiently deploy RAC within the Oracle Exadata ecosystem Fully leverage Storage Cell s extraordinary performance via Offloading Smart Scans and Hybrid Columnar Compression Manage Exadata with OEM 12c perform setup configuration asset target discovery and day to day administration Tune Oracle Exadata for even better performance Perform Exadata Backup Recovery DR with RMAN and Data Guard Migrate to Oracle Exadata from other platforms Use Oracle Exadata with the ZFS Storage Appliance Consolidate within the Exadata Database Cloud On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops R. Meersman, 2004-10-14 This book constitutes the joint refereed proceedings of seven international workshops held as part of OTM 2004 in Agia Napa Cyprus in October 2004 The 73 revised papers presented together with 31 abstracts of posters from the OTM main conferences were carefully reviewed and selected from more than 150 submissions In accordance with the 7 workshops the papers are organized in topical sections on grid computing and its applications to data analysis Java technologies for real time and embedded systems modeling inter organizational systems regulatory ontologies ontologies semantics and e learning PhD symposium and interoperability

On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops Zahir Tari, Angelo Corsaro, 2004-10-14 A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference and presented by the students in front of a wider audience These students also got free access to all other parts of the OTM program and only paid a heavily discounted fee for the Doctoral Symposium itself In fact their attendance was largely sponsored by the other participants If evaluated as successful it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum All three main conferences and the associated workshops share the distributed aspects of modern computing systems and the resulting application pull created by the Internet and the so called Semantic Web For DOA 2004 the

primary emphasis stayed on the distributed object infrastructure for ODBASE 2004 it was the knowledge bases and methods required for enabling the use of formal semantics and for CoopIS 2004 the main topic was the interaction of such technologies and methods with management issues such as occurs in networked organizations These subject areas naturally overlap and many submissions in fact also treat envisaged mutual impacts among them

Handbook on Parallel and Distributed Processing

Jacek Blazewicz, Klaus Ecker, Brigitte Plateau, Denis Trystram, 2013-03-09 In this volume authors of academia and practice provide practitioners scientists and graduate students with a good overview of basic methods and paradigms as well as important issues and trends across the broad spectrum of parallel and distributed processing In particular the book covers fundamental topics such as efficient parallel algorithms languages for parallel processing parallel operating systems architecture of parallel and distributed systems management of resources tools for parallel computing parallel database systems and multimedia object servers and networking aspects of distributed and parallel computing Three chapters are dedicated to applications parallel and distributed scientific computing high performance computing in molecular sciences and multimedia applications for parallel and distributed systems Summing up the Handbook is indispensable for academics and professionals who are interested in learning the leading expert's view of the topic

The Complete Business Process Handbook

Mark Von Rosing, Henrik von Scheel, August-Wilhelm Scheer, 2014-12-06 The Complete Business Process

Handbook is the most comprehensive body of knowledge on business processes with revealing new research Written as a practical guide for Executives Practitioners Managers and Students by the authorities that have shaped the way we think and work with process today It stands out as a masterpiece being part of the BPM bachelor and master degree curriculum at universities around the world with revealing academic research and insight from the leaders in the market This book provides everything you need to know about the processes and frameworks methods and approaches to implement BPM Through real world examples best practices LEADING practices and advice from experts readers will understand how BPM works and how to best use it to their advantage Cases from industry leaders and innovators show how early adopters of LEADING Practices improved their businesses by using BPM technology and methodology As the first of three volumes this book represents the most comprehensive body of knowledge published on business process Following closely behind the second volume uniquely bridges theory with how BPM is applied today with the most extensive information on extended BPM The third volume will explore award winning real life examples of leading business process practices and how it can be replaced to your advantage Learn what Business Process is and how to get started Comprehensive historical process evolution In depth look at the Process Anatomy Semantics and Ontology Find out how to link Strategy to Operation with value driven BPM Uncover how to establish a way of Thinking Working Modelling and Implementation Explore comprehensive Frameworks Methods and Approaches How to build BPM competencies and establish a Center of Excellence Discover how to apply Social BPM Sustainable and Evidence based BPM Learn how Value Performance Measurement and

Management Learn how to roll out and deploy process Explore how to enable Process Owners Roles and Knowledge Workers
 Discover how to Process and Application Modelling Uncover Process Lifecycle Maturity Alignment and Continuous
 Improvement Practical continuous improvement with the way of Governance Future BPM trends that will affect business

 Supowit,2023-05-23 Logicians have developed beautiful algorithmic techniques for the construction of computably
 enumerable sets This textbook presents these techniques in a unified way that should appeal to computer scientists
 Specifically the book explains organizes and compares various algorithmic techniques used in computability theory which
 was formerly called classical recursion theory This area of study has produced some of the most beautiful and subtle
 algorithms ever developed for any problems These algorithms are little known outside of a niche within the mathematical
 logic community By presenting them in a style familiar to computer scientists the intent is to greatly broaden their influence
 and appeal Topics and features All other books in this field focus on the mathematical results rather than on the algorithms
 There are many exercises here most of which relate to details of the algorithms The proofs involving priority trees are written

here in greater detail and with more intuition than can be found elsewhere in the literature The algorithms are presented in a pseudocode very similar to that used in textbooks such as that by Cormen Leiserson Rivest and Stein on concrete algorithms In addition to their aesthetic value the algorithmic ideas developed for these abstract problems might find applications in more practical areas Graduate students in computer science or in mathematical logic constitute the primary audience Furthermore when the author taught a one semester graduate course based on this material a number of advanced undergraduates majoring in computer science or mathematics or both took the course and flourished in it Kenneth J Supowit is an Associate Professor Emeritus Department of Computer Science Engineering Ohio State University Columbus Ohio US

Dynamic Supply Chain Alignment John Gattorna, 2016-04-29 Just like the world financial system but for different reasons 21st century corporations need a new business model for their enterprise supply chains The old conventions no longer work in this new world of volatile and increasingly unpredictable demand and supply The enterprise needs to become more connected to its own parts as well as its partners up and down the chains it participates in So too we need to embrace new ways of looking at customers to gain deeper more insightful impressions of what they are telling us about the way they want to buy our products and services Finally these signals need converting into corresponding action driven by the people in the business leaders and staff alike who are aligned to their customers wishes This is the world of dynamic supply chain alignment where increasingly supply chains are the business In the follow up to his hugely successful Strategic Supply Chain Alignment John Gattorna's *Dynamic Supply Chain Alignment* explores how to create and sustain multiple supply chains with a level of flexibility and responsiveness that allow you to respond to opportunities and threats at the same time aligning with your suppliers your partners and your customers When more executives get to this stage of development the profits will flow more readily and sustainability of performance will not be the same issue it is today The way forward is right there in front of us but says John Gattorna we must throw off old ways and embrace the new

Algorithms and Computation Otfried Cheong, Kyung-Yong Chwa, Kunsoo Park, 2010-12-06 Annotation This book constitutes the refereed proceedings of the 21st International Symposium on Algorithms and Computation ISAAC 2010 held in Jeju South Korea in December 2010 The 77 revised full papers presented were carefully reviewed and selected from 182 submissions for inclusion in the book This volume contains topics such as approximation algorithm complexity data structure and algorithm combinatorial optimization graph algorithm computational geometry graph coloring fixed parameter tractability optimization online algorithm and scheduling

Handbook of Computability Theory E.R. Griffor, 1999-10-01 The chapters of this volume all have their own level of presentation The topics have been chosen based on the active research interest associated with them Since the interest in some topics is older than that in others some presentations contain fundamental definitions and basic results while others relate very little of the elementary theory behind them and aim directly toward an exposition of advanced results Presentations of the latter sort are in some cases restricted to a short survey of recent results due to the complexity of the

methods and proofs themselves Hence the variation in level of presentation from chapter to chapter only reflects the conceptual situation itself One example of this is the collective efforts to develop an acceptable theory of computation on the real numbers The last two decades has seen at least two new definitions of effective operations on the real numbers

Diagonalization, Uniformity, and Fixed-point Theorems Kenneth W. Regan, 1988 *The Foundational Debate* Werner DePauli-Schimanovich, Eckehart Köhler, F. Stadler, 2013-03-14 Constructibility and complexity play central roles in recent research in computer science mathematics and physics For example scientists are investigating the complexity of computer programs constructive proofs in mathematics and the randomness of physical processes But there are different approaches to the explication of these concepts This volume presents important research on the state of this discussion especially as it refers to quantum mechanics This foundational debate in computer science mathematics and physics was already fully developed in 1930 in the Vienna Circle A special section is devoted to its real founder Hans Hahn referring to his contribution to the history and philosophy of science The documentation section presents articles on the early Philipp Frank and on the Vienna Circle in exile Reviews cover important recent literature on logical empiricism and related topics

Boolean Functions and Computation Models Peter Clote, Evangelos Kranakis, 2013-03-09 The foundations of computational complexity theory go back to Alan Turing in the 1930s who was concerned with the existence of automatic procedures deciding the validity of mathematical statements The first example of such a problem was the undecidability of the Halting Problem which is essentially the question of debugging a computer program Will a given program eventually halt Computational complexity today addresses the quantitative aspects of the solutions obtained Is the problem to be solved tractable But how does one measure the intractability of computation Several ideas were proposed A Cobham Cob65 raised the question of what is the right model in order to measure a computation step M Rabin Rab60 proposed the introduction of axioms that a complexity measure should satisfy and C Shannon Sha49 suggested the boolean circuit that computes a boolean function However an important question remains What is the nature of computation In 1957 John von Neumann vN58 wrote in his notes for the Silliman Lectures concerning the nature of computation and the human brain that logics and statistics should be primarily although not exclusively viewed as the basic tools of information theory Also that body of experience which has grown up around the planning evaluating and coding of complicated logical and mathematical automata will be the focus of much of this information theory The most typical but not the only such automata are of course the large electronic computing machines *Advances in Cryptology -- ASIACRYPT 2012* Xiaoyun Wang, Kazuo

Automata, Languages and Programming Jiri

Wiedermann, Peter van Emde Boas, Mogens Nielsen, 2003-07-31 This book constitutes the refereed proceedings of the 26th International Colloquium on Automata Languages and Programming ICALP 99 held in Prague Czech Republic in July 1999. The 56 revised full papers presented were carefully reviewed and selected from a total of 126 submissions also included are 11 invited contributions. Among the topics addressed are approximation algorithms algebra and circuits concurrency semantics and rewriting process algebras graphs distributed computing logic of programs sorting and searching automata nonstandard computing regular languages combinatorial optimization automata and logics string algorithms and applied logics.

Algorithms and Computation Seok-Hee Hong, Hiroshi Nagamochi, Takuro Fukunaga, 2008-12 This book constitutes the refereed proceedings of the 19th International Symposium on Algorithms and Computation ISAAC 2008 held in Gold Coast Australia in December 2008. The 78 revised full papers together with 3 invited talks presented were carefully reviewed and selected from 229 submissions for inclusion in the book. The papers are organized in topical sections on approximation algorithms online algorithms data structure and algorithms game theory graph algorithms fixed parameter tractability distributed algorithms database approximation algorithms computational biology computational geometry complexity networks optimization as well as routing.
