Educational Response, Inclusion and Empowerment for SDGs in Emerging Economies Mustafa Öztürk, 2022-08-22 This volume analyzes cases from emerging economies in relation to the global endeavor to promote the vision of sustainable development in all forms of education. It aims to discuss the significance of hearing local voices and understanding local discourse regarding strategies for action for change and the role of educational systems as a means to communicate, promote and educate for the Sustainable Development Goals (SDGs). In this book, emerging economies are defined as newly industrialized countries that have not yet reached developed status but have in a macro economic sense outpaced their developing counterparts. In this context, the book highlights how education in emerging economies could extend conventional economic methods to sustainability issues or depart from money based calculations and business dominated values to promotion of real life considerations and ethical, environmental and humanistic values. With the help of this volume, readers will have a chance to look at educational response, inclusion and empowerment for SDGs in countries with emerging economies and to grasp the synthesis of Education for Sustainable Development, Global Citizenship Education, ESD, GCE within the overall national educational systems. This volume focuses on early childhood through upper secondary education.

STEM Education in Poverty Brantina Chirinda, Gladys Sunzuma, Perkins Muredzi, 2025-07-15 This book is about Science, Technology, Engineering and Mathematics (STEM) education in poverty and the lessons we learn from Zimbabwe. The world is driving towards the fourth Industrial Revolution (4IR) where economic growth has been attributed to STEM education. STEM education is vital in this era where both developed and developing countries are undergoing rapid changes. Globally, STEM education has been practised differently in schools and universities. University programs, new school curricula, instructional methods, extracurricular programs and professional development programs for in-service teachers have been created to cater to STEM subjects. STEM education is envisioned to produce critical thinkers, inventors, creators, problem solvers, innovators and professionals who will solve the world's ever-changing challenges including inequity, food insecurity, climate change, inequality and poverty. STEM is essential to modern education. Zimbabwe has faced significant economic challenges but has made remarkable strides in STEM education. By examining the successes and challenges of STEM education in Zimbabwe, we can learn valuable lessons about improving STEM education in underserved communities. This book contributes to the international debate surrounding the optimal STEM education for students in underserved schools. It incorporates detailed accounts of STEM education in Zimbabwe schools, shedding light on the challenges students and educators face in impoverished areas. In Zimbabwe, STEM education faces significant challenges such as materials and facilities, pedagogy, policy reform, access and relevance. Some of the main issues highlighted in this book are the need for more resources including funding, teaching materials and adequate laboratories. Effective STEM pedagogy is hampered by an education system that emphasises the curriculum and teacher-centred focus instead of focusing on how students can be taught or learn.

Research has shown that in Zimbabwe STEM teachers must apply inventive pedagogies and suitable learner centred STEM teaching approaches. As a result there is a need for more STEM related programs and courses in schools and universities to improve the opportunities for students to pursue careers in these fields. Another challenge is the need for more awareness about the opportunities and importance of STEM education and interest in STEM subjects among students which can be attributed to a lack of exposure and understanding of the relevance and importance of these fields in today's world. While lack of resources and other challenges hinder effectiveness, opportunity lies in promising pathways of policy and practice. In Zimbabwe there is a varying degree of success in the implemented competence based curriculum which emphasises inquiry based learning and STEM education. Finally there is a need for early exposure to STEM based career opportunities and for more collaboration between the government private sector and educational institutions to address these challenges and promote STEM education in Zimbabwe. This book uses Zimbabwe as an example to explore STEM education in poverty. By examining the successes and challenges of STEM education in Zimbabwe this book offers valuable insights into how STEM education can be integrated into the curriculum in countries with developing and emerging economies. This book is an essential resource for anyone interested in improving STEM education in underserved communities. **Mathematics**

Teacher Training and Development in Africa Kakoma Luneta, Marc Schäfer, 2024-10-09. This edited volume addresses the need for reforms in mathematics teacher training spurred by scientific advancements and societal changes encompassing calls for changes in curricula content and instructional methods. The text highlights the complexities of teaching mathematics specifically within Africa. It provides an exploration into how mathematics teacher training has evolved to address challenges such as ineffective teaching approaches, lack of resources, technological limitations, and outdated training programs. Through comprehensive systematic reviews for each country in the African region, documentation is provided on the past, present, and envisioned future of teacher training programs. This undertaking provides a detailed analysis of mathematics teacher training, offering valuable insights for teacher trainers, government ministries of education, and stakeholders across Africa. For anyone invested in enhancing mathematics education in the region, this book offers indispensable guidance and knowledge.

Raising the Impact of Education Research in Africa Charl C. Wolhuter, 2018-12-01. The low demonstrable effect of education research done in South Africa, in particular, and Africa in general, continues to be a problem in scientific records in the educational sciences. This scholarly collected work addresses this obstacle and focuses on recommendations from scholars in different sectorial categories in the field of education. Scholars from a variety of sub-fields within the educational sciences reflect on this particular matter, revisiting the history of research and research outcomes, and offering informed recommendations based on in-depth investigation and analysis of aspects of the various discourses within the relevant sub-fields. The scope of the content of this collected work centres on the issue of the lack of scientific records concerning the scientific raising of the impact of education research. The book aims at making a specific contribution to the educational

sciences by stimulating scholarly discussion around how to increase the recording of the significance of educational research done in Africa and in South Africa in particular and to redirect the research agenda into the direction of making more impact. Impact is conceptualised to mean both scholarly impact that is being cited and being used as foundation for theory building and for further research and practical impact that is improvement of practice teaching and learning in education institutions at all levels.
