

Discussion Paper on E-commerce in India

Introduction:

E-commerce in recent times has been growing rapidly across the world. According to Report of Digital-Commerce, IAMAI-IMRB (2013), e-commerce industry in India has witnessed a growth of US\$ 3.8 billion in the year 2009 to US\$ 9.5 billion in 2012. By 2013, the market is expected to reach US\$12.6 billion, showing year to year growth of 34%. Industry sources indicate that this growth can be sustained over a longer period of time as e-commerce will continue to reach new geographies and encompass new markets. E-commerce means sale or purchase of goods and services conducted over network of computers or TV channels by methods specifically designed for the purpose. Even though goods and services are ordered electronically, payments or delivery of goods and services need not be conducted online. E-commerce transaction can be between businesses, households, individuals, governments and other public or private organizations. There are numerous types of e-commerce transactions that occur online ranging from sale of clothes, shoes, books etc. to services such as airline tickets or making hotel bookings etc.

1.2 The bookings done through electronic communication could be Business to Business (B2B) or Business to Consumer (B2C). **Business to Business** i.e. **B2B** is e-commerce between businesses such as between a manufacturer and a wholesaler or between a wholesaler and a retailer. As per the WTO report WT/COMTD/W/193, global B2B transactions comprise 90% of all e-commerce. According to research conducted by USA based International Data Corporation, it is estimated that global B2B commerce, especially among wholesalers and distributors amounted to US\$12.4 trillion at the end of 2012.

1.3 The bookings done electronically between **Business to Consumer** for purchase or sale of goods and services is known as **B2C e-commerce**. Although B2C e-commerce receives a lot of attention, B2B transactions far exceed B2C transactions. According to IDC, global B2C transactions are estimated to have reached US\$ 1.2 trillion at the end of 2012, ten times less than B2B transactions. B2C e-Commerce entails business selling to general public/ e-catalogues that make use of shopping place. There are several variants in B2C model that operate in e-commerce arena.

1.4 From the point of view of business, there are two models of e-commerce. First model is known as 'Market Place' model, which works like exchange for buyers and sellers. The 'Market Place' provides a platform for business transactions between buyers and sellers to take place and in return for the services provided, earns commission from sellers of goods/services. Ownership of the inventory in this model vests with the number of enterprises which advertise their products on the website and are ultimate sellers of goods or services. The 'Market Place', thus, works as a facilitator of e-commerce. Different from the 'Market Place' model is the second category of business known as 'Inventory Based' model. In this model, ownership of goods and services and market place vests with the same entity. This model does not work as a facilitator of e-commerce, being delineated therefrom, but is engaged in e-commerce directly.

Sample Survey Theory Paul Kottnerus, 2012-11-12 This volume deals primarily with the classical question of how to draw conclusions about the population mean of a variable given a sample with observations on that variable Another classical question is how to use prior knowledge of an economic or definitional relationship between the population means of several variables provided that the variables are observed in a sample The present volume is a compilation of two discussion papers and some additional notes on these two basic questions The discussion papers and notes were prepared for a 15 hour course at Statistics Netherlands in Voorburg in February 2000 The first discussion paper is entitled A Memoir on Sampling and the Generalized Intrasample Correlation Coefficient 1999 It describes a new approach to the problem of unequal probability sampling The second discussion paper The General Restriction Estimator 2000 deals with the problem of how to find constrained estimators that obey a given set of restrictions imposed on the parameters to be estimated Parts I and II of the volume provide a novel and systematic treatment of sampling theory considered from the angle of the sampling autocorrelation coefficient ρ The same concept plays an important role in the analysis of time series Although this concept is also well known in sampling theory for instance in cluster sampling and systematic sampling generalizations of ρ for an arbitrary sampling design are to my knowledge not readily found in the literature

Macroeconomic Theory Volker Böhm, 2017-10-30 This textbook offers a unique approach to macroeconomic theory built on microeconomic foundations of monetary macroeconomics within a unified framework of an intertemporal general equilibrium model extended to a sequential and dynamic analysis It investigates the implications of expectations and of stationary fiscal policies on allocations on the quantity of money and on the dynamic evolution of the economy with and without noise The text contrasts and compares the two main competing approaches in macroeconomics within the same intertemporal model of a closed monetary economy the one postulating full price flexibility to guarantee equilibrium in all markets at all times under perfect foresight or rational expectations versus the so called disequilibrium approach where trading occurs at non market clearing prices and wages when these adjust sluggishly from period to period in response to market disequilibrium signals

Labor-related knowledge transfers from Chinese foreign direct investment in Ethiopia and Tanzania Ellis, Mia,McMillan, Margaret S.,Sovani, Manali,2021-12-28 We examine worker training by Chinese manufacturing firms using nationally representative firm level data from both Ethiopia and Tanzania While Chinese firms make up a relatively small portion of the manufacturing industry in both Ethiopia and Tanzania at the firm level they contribute significantly to both domestic employment and labor training In both countries more than 85 percent of the workers employed by Chinese firms are local and Chinese firms and other foreign firms are more likely to offer labor training than their domestic counterparts However we find evidence that Chinese firms underperform relative to other foreign firms in the share of local workers employed and in Tanzania the difference is especially large for managerial positions **Sexual Development in Childhood**
