SECTION 11.1 DESCRIBING CHEMICAL REACTIONS (pages 321–329)

This section explains how to write equations describing chemical reactions using appropriate symbols. It also describes how to write balanced chemical equations when given the names or formulas of the reactants and products in a chemical reaction.

► Writing Chemical Equations (pages 321–323)

1. A chemical reaction occurs when one or more _____ change into one or more new substances called _____.
2. The arrow in a reaction means _____.
3. Is the following sentence true or false? When there are two or more reactants or products, they are separated by an arrow. _____
4. Write a word equation that describes the following reactions.
 - a. Acetylene reacts with oxygen to produce carbon dioxide and water.

 - b. When heated, mercury(II) oxide reacts to form mercury and oxygen.

5. What is a chemical equation?

6. A chemical reaction that shows only the formulas, but not the relative amounts of the reactants and products is a(n) _____.
7. Identify the reactant(s) and product(s) in the chemical equation $\text{Li} + \text{Br}_2 \longrightarrow \text{LiBr}$.
 - a. reactant(s) _____
 - b. product(s) _____
8. Circle the letter of each statement that is true about a catalyst.
 - a. A catalyst is the new material produced as a result of a chemical reaction.
 - b. A catalyst is not used up in a chemical reaction.
 - c. A catalyst adds heat to a chemical reaction.

The Sciences James Trefil, Robert M. Hazen, 2022-12-20 The Sciences An Integrated Approach 9th Edition by James Trefil and Robert Hazen recognizes that science forms a seamless web of knowledge about the universe This text fully integrates physics chemistry astronomy Earth sciences and biology and emphasizes general principles and their application to real world situations The goal of the text is to help students achieve scientific literacy Applauded by students and instructors for its easy to read style and detail appropriate for non science majors the ninth edition has been updated to bring the most up to date coverage to the students in all areas of science with increased emphasis on climate change sustainability viruses and public health and an extensively updated chapter on the importance of bioengineering FEATURES INCLUDE The Science of Life To help show the interdisciplinary nature of the many concepts introduced in the text sections on living things are included in most chapters The chapters that emphasize principles specifically related to life are at the end of the book but the biological examples appear throughout The Ongoing Process of Science Science is a never ending process of asking questions and seeking answers In these features some of the most exciting questions currently being addressed by scientists are examined Mathematical Equations and Worked Examples Whenever an equation is introduced it is presented in three steps first as a sentence second as a word equation and finally in its traditional symbolic form In this way students can focus on the meaning rather than the abstraction of the mathematics An appendix on English and SI units is also included Science by the Numbers To help students understand the importance of simple mathematical calculations in areas of magnitude several nontraditional calculations have been incorporated For example how much solid waste is generated in the United States how long it would take to erode a mountain and how many people were required to build Stonehenge Great Ideas and Great Ideas Concept Each chapter begins with a statement of a great unifying idea or theme in science and a concept map so that students immediately grasp the chief concept of the chapter and how the idea relates to the different branches of science These statements are intended to provide a framework for placing everyday experiences into a broad context Stop and Think Questions challenge students to think critically about the implications of a scientific discovery or principle Resources for Instructors and Students including practice quizzes flashcards lecture slides an instructor s manual images and tables from the book a test bank and much more Kinetic Models of Catalytic Reactions G.S. Yablonskii, V.I. Bykov, V.I. Elokhin, A.N. Gorban, 1991-04-17 This book has been written by a group of mathematicians and chemists whose common

interest is in the complex dynamics of catalytic reactions Based on developments in mathematical chemistry a general theory is described that allows the investigation of the relationships between the kinetic characteristics of complex reactions and their detailed reaction mechanism Furthermore a comprehensive analysis is made of some typical mechanism of catalytic reactions in particular for the oxidation of carbon monoxide on platinum metals In fact the book presents three kinetics a detailed oriented to the elucidation of a detailed reaction mechanism according to its kinetic laws b applied with the aim of obtaining kinetic relationships for the further design of chemical reactors and c mathematical kinetics whose purpose is the analysis of mathematical models for heterogeneous catalytic reactions taking place under steady or unsteady state conditions
