

## Chapter 19 Air Pressure and Wind

## Section 19.3 Regional Wind Systems

*This section discusses local winds and how wind is measured. It also explains El Niño and La Niña.*

## Reading Strategy

Before you read, use Figure 17 on page 547 to locate examples of the driest and wettest regions of Earth. After you read, identify the dominant wind system for each location. For more information on this Reading Strategy, see the **Reading and Study Skills** in the **Skills and Reference Handbook** at the end of your textbook.

Precipitation	Location	Dominant Wind System
Extremely low	a. <i>Sahara and other Arabian Desert</i>	b. <i>Sinking trade winds produce tropical high.</i>
Extremely high	c. <i>Amazon rain forest</i>	d. <i>Rising trade winds produce equatorial low.</i>

## Local Winds

- \_\_\_\_\_ *Local winds* are small-scale winds produced by a locally generated pressure gradient.
- ☞ List two causes of local winds. *topographic effects, variations in surface composition*

*Match each description with its local wind.*

*Fundamentals of Air Pollution* Arthur C. Stern, 2014-01-01 *Fundamentals of Air Pollution* focuses on air quality and the control of air pollution. This book discusses the meteorology of air pollution and the behavior of the atmosphere which differentiates air pollution from the various aspects of environmental management and protection. Organized into four parts encompassing 28 chapters, this text begins with an overview of the gaseous composition of unpolluted air including nitrogen, oxygen, water, argon, carbon dioxide, neon, helium, methane, hydrogen, nitrous oxide, and organic vapor. This book then differentiates the primary pollutants that are emitted directly from the source and the secondary pollutants that cause eye irritation, smog, and haze. Other chapters consider the adverse effects of air pollution on human health, environment, and economy. This book is a valuable resource to air pollution, space, atmospheric, and medical scientists, as well as environmentalists, ecologists, biologists, and meteorologists. This text will also be useful to economists, engineers, sanitarians, chemists, public administrators, educators, public relations specialists, researchers, and students. Brower, National Climatic Data Center (U.S.), 1988 **Energy Research Abstracts**, 1984 **Scientific and Technical Aerospace Reports**, 1990. Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.

Increase in electricity demand and environmental issues resulted in fast development of energy production from renewable resources. In the long term, application of RES can guarantee the ecologically sustainable energy supply. This book indicates recent trends and developments of renewable energy resources that are organized in 11 chapters. It can be a source of information and basis for discussion for readers with different backgrounds. *A Collection of Technical Papers*, 1980 **The Atmosphere over Mountainous Regions** Miguel A. C. Teixeira, Daniel J. Kirshbaum, Haraldur Ólafsson, Peter F. Sheridan, Ivana Stiperski, 2016-11-09. Mountainous regions occupy a significant fraction of the Earth's continents and are characterized by specific meteorological phenomena operating on a wide range of scales. Being a home to large human populations, the impact of mountains on weather and hydrology has significant practical consequences. Mountains modulate the climate and create microclimates; induce different types of thermally and dynamically driven circulations; generate atmospheric waves of various scales known as mountain waves; and affect the boundary layer characteristics and the dispersion of pollutants. At the local scale, strong downslope winds linked with mountain waves such as the Föhn and Bora can cause severe damage. Mountain wave breaking in the high atmosphere is a source of Clear Air Turbulence and lee wave rotors are a major near surface

aviation hazard Mountains also act to block strongly stratified air layers leading to the formation of valley cold air pools with implications for road safety pollution crop damage etc and gap flows Presently neither the fine scale structure of orographic precipitation nor the initiation of deep convection by mountainous terrain can be resolved adequately by regional to global scale models requiring appropriate downscaling or parameterization Additionally the shortest mountain waves need to be parameterized in global weather and climate prediction models because they exert a drag on the atmosphere This drag not only decelerates the global atmospheric circulation but also affects temperatures in the polar stratosphere which control ozone depletion It is likely that both mountain wave drag and orographic precipitation lead to non trivial feedbacks in climate change scenarios Measurement campaigns such as MAP T REX Materhorn COLPEX and i Box provided a wealth of mountain meteorology field data which is only starting to be explored Recent advances in computing power allow numerical simulations of unprecedented resolution e g LES modelling of rotors mountain wave turbulence and boundary layers in mountainous regions This will lead to important advances in understanding these phenomena as well as mixing and pollutant dispersion over complex terrain or the onset and breakdown of cold air pools On the other hand recent analyses of global circulation biases point towards missing drag especially in the southern hemisphere which may be due to processes currently neglected in parameterizations A better understanding of flow over orography is also crucial for a better management of wind power and a more effective use of data assimilation over complex terrain This Research Topic includes contributions that aim to shed light on a number of these issues using theory numerical modelling field measurements and laboratory experiments *Geological Survey Water-supply Paper* ,1968 **Energy: a Continuing Bibliography with Indexes** ,1981

**Effects of Climate Change Across Ocean Regions** Ove Hoegh-Guldberg,Elvira S. Poloczanska,2018-07-05 The IPCC Fifth Assessment Report AR5 highlighted that conditions within Earth s ocean are changing more rapidly than any of the time during the past 65 million years and as a consequence major changes are occurring in natural and human systems While this major report as enhanced our understanding of the complexity of ocean issues we propose this research topic as an opportunity to expand discussion on past present and future changes across oceans regions *Meteorology of Tropical West Africa* Douglas J. Parker,Mariane Diop-Kane,2017-04-24 *Meteorology of tropical West Africa* the Forecasters Handbook presents the science and practice of weather forecasting for an important region of the tropics Connecting basic theory with forecasting practice the book provides a unique training volume for operational weather forecasters and is also suitable for students of tropical meteorology The West African region contains a number of archetypal climatic zones meaning that the science of its weather and climate applies to many other tropical regions West Africa also exhibits some of the world s most remarkable weather systems making it an inspiring region for students to investigate The weather of West Africa affects human livelihoods on a daily basis and can contribute to hardship poverty and mortality Therefore the ability to understand and predict the weather has the potential to deliver significant benefits to both society and economies The book includes

comprehensive background material alongside documentation of weather forecasting methods Many examples taken from observations of West African weather systems are included and online case studies are referenced widely     **Mountain Environments** Romola Parish,2014-06-03 This book breaks the ground in Geographical texts by transcending a strictly regional or topical focus It presents the opportunities and constraints that mountains and their resources offer to local and global populations the impacts of environmental and economic change development and globalisation on mountain environments Part of the Ecogeography series edited by Richard Hugget     **Local Climatological Data** ,1961
