style actions by ecoguards often jointly with the Congolese Army who explicitly target criminalize and brutalize Batwa At the same time the park consistently fails to meet environmental expectations and objectives Thus the PNKB represents a clear case of how fortress conservation fails both people and the environment Regrettably it is not an isolated example of flawed conservation policy Instead it is indicative of the institutional shortcomings and systemic failures inherent in the dominant ways in which conservation is pursued by states and promoted by international conservation actors in the Congo Basin and in other parts of the world

Intellectual Property and Biodiversity Michelangelo Temmerman, 2011-12-12 Biotechnology is at the heart of heated debates about ethics safety economic development and about the control over the biological materials and technologies used The latter grossly called biodiversity issues relating to the application of intellectual property has been the subject of a wealth of literature Yet the situation of animal genetic resources specifically has only marginally been addressed so far Many books and articles address biotechnology and agriculture but have only plants and seeds in mind Case law and specific regulation is equally scarce Exacerbated by the so called erosion of animal genetic resources climate change the globalization of the market place and a strong concentration of markets animal genetic resources however demand specific analysis and adjustments in intellectual property law The decoupling of rights over animal genetic resources as an abstract concept from those over the concrete animals is a fact today The application of patents in this context became a full fledged part of the management of animal genetic resources This monograph analyzes against this background the impact of the patent system on ownership traditions in agriculture on animal welfare and on biodiversity It looks at how those factors in turn are likely to affect the shape of patent law and how they should affect it The author hereby focuses on important specific issues arising including the following the underlying elements deciding on the shape of regulation innovation economic development agriculture human rights animal welfare the conservation of resources and equal trading conditions the continuing applicability of trademarks geographical indications copyright and trade secrets

patentability rules and exclusions the extension of patent rights over progeny the meaning of essentially biotechnological processes the legal definitions of morality and ordre public in the context of animal welfare and the future of international patent law in the context of global governance theories With detailed investigation of how three major jurisdictions the European Union the United States and Canada have regulated the matter the book highlights unresolved issues in the laws dealing with animal genetic resources How do the usual principles of patent law affect ownership over animals in agriculture To what extent is patent law in accordance with neighbouring fields of regulation with relation to animal welfare How can intellectual property be used to alter stimulate or tackle developments in the realm of the conservation and promotion of biodiversity Questions like these are asked checked upon the more technical country studies and then used to put to test the adequacy of international patent regulation in a final chapter As a deeply informed overview of the arguments and discussion points this is the only book of its kind It links general discussions to the often technical and complicated patent regulations in the specific context of animal genetic resources It is sure to bring lawyers in the field closer to the policy debates and decision makers closer to the precise idiosyncrasies of patent law Biology Trending Eli Minkoff, Jennifer K.

Kukal, Razeef Mohd, 2024-10-18 Soil and ecosystem modeling is crucial for managing and comprehending ecological processes and should be required for all studies focusing on agriculture systems environmental management environmental sciences and ecology Offering an array of modeling strategies that include applications of

machine learning deep learning and other AI methods the book explores and demonstrates soil agriculture and ecosystem modeling for fostering smart sustainable agricultural practices The volume takes into account the mechanisms of climate change as well as the challenges and hazards related to soil health providing insight into long term and sophisticated sustainable agriculture crop protection and management soil carbon sequestration and ecology preservation

Capitalism and Environmental Collapse Luiz Marques, 2020-08-17 This book intends to be an alert to the fact that the curve measuring environmental costs against the economic benefits of capitalism has irreversibly entered into a negative phase The prospect of an environmental collapse has been evidenced by the sciences and the humanities since the 1960s Today it imposes its urgency This collapse differs from past civilizations in that it is neither local nor just civilizational It is global and occurs at the broadest level of the biosphere accelerated by the convergence of different socio environmental crises such as Earth energy imbalance climate change and global warming Sea level rise Decrease and degradation of forests Collapse of terrestrial and aquatic biodiversity Floods droughts wildfires and extreme weather events Degradation of soils and water resources Increase in pollution caused by fossil fuels and coal Increase in waste production and industrial intoxication The book is divided in two parts In the first part it presents a comprehensive review of scientific data to show the already visible effects of each of the different environmental crises and its consequences to human life on Earth In the second part Luiz Marques critically discusses what he calls the three concentric illusions that prevent us from realizing the gravity of the current socio environmental crises the illusion of a sustainable capitalism the illusion that economic growth is still capable of providing more well being and the anthropocentric illusion Finally Marques argues that fitting back into the biosphere will only be possible if we dismantle the expansive socioeconomic gear that has shaped our societies since the 16th century by moving from a Social Contract to a Natural Contract which takes into account the whole biosphere According to him the future society will be post capitalist or it will not be a complex society and even perhaps we must fear no society at all This book is backed up with the latest and best science and has made the complexities understandable for the average reader all in a context of hope for the future William J Ripple PhD Distinguished Professor of Ecology Director of the Alliance of World Scientists Oregon State University

Urban Natures Ferne Edwards, Lucia Alexandra Popartan, Ida Nilstad Pettersen, 2023-09-15 Efforts to create greener urban spaces have historically taken many forms often disorganized and undisciplined Recently however the push towards greener cities has evolved into a more cohesive movement Drawing from multidisciplinary case studies *Urban Natures* examines the possibilities of an ethical lively multi species city with the understanding that humanity's relationship to nature is politically constructed Covering a wide range of sectors cities and urban spaces as well as topics ranging from edible cities to issues of power and more than human methodologies this volume pushes our imagination of a green urban future
