Fundamentals of Social Research Methods Claire Bless, Craig Higson-Smith, 2000 *Forces and Motion Science Fair Projects, Revised and Expanded Using the Scientific Method* Robert Gardner, 2013-07 How can you tell if a moving object is accelerating? Why are pulleys used to lift objects? Can you observe weightlessness in everyday situations? Using easy-to-find materials and the scientific method, you can learn the answers to these questions and more. If you are interested in competing in science fairs, the book contains lots of great suggestions and ideas for further experiments. **Accountability in Social Research**

Norma R.A. Romm, 2001-05-31 The book considers issues relating to accountability in social research by juxtaposing seven ways of approaching the issues and by moving toward the development of a particular approach to the earning of trust on the part of researchers. A conception of the practice and assessment of discursive accountability is presented as an option for consideration. The book grapples with the issue of accountability in social research by considering the extent to which and ways in which it is addressed in a number of different positions regarding the practice of social science. The focus of the book is on reviewing discourses around the practice of professional inquiry with a view to highlighting differing arguments around the question of what it might mean to assess researchers' accountabilities. The book is structured around considering in detail various views on accountability in relation to one another. A comprehensive comparison of arguments is presented in the first two chapters of the book. The debate that is set up in the first two chapters forms the background to the elaboration and development in Chapter 3 of constructivist argumentation in relation to the question of how accounts are set forth by

researchers should be treated by colleagues participants and other audiences The continuing debate about the status to be afforded to constructions developed by researchers is tackled in this chapter Constructivist thinking is then extended toward what is named in the book a trusting constructivist position This position focuses on ways in which trust earning and trust awarding in the context of social inquiry can proceed without researchers having to justify themselves as striving to gain access to knowledge as representation of reality Through the development of the trusting constructivist position the book explores ways of creating trust through processes of social discourse An assessment of actual research projects in view of the debates set up in earlier chapters then takes place Through these assessments readers can relate the details of the arguments developed in earlier chapters to their implications for judging the practice of accountable social inquiry

Introduction to Scientific Psychology Henry D. Jr. Schlinger, Alan Poling, 2013-11-21 We humans are faced with an interesting problem That which we think we understand the most our own behavior we probably understand the least On the eve of a new millennium the planet is beset by a host of problems that are for the most part caused by human behavior Ironically although it seems that the greatest impact of our behavior is on the planet and its other inhabitants we may actually be threatening our own future the most For example we have caused untold harm to the air we breathe to the water we drink and by extension to much of the food we eat More important perhaps we have created a society in which among other things many people are anxious and depressed young women starve themselves and alcohol and cigarette use are responsible for hundreds of thousands of cases of illness and death every year And humans still murder one another at an astounding rate while at the same time continuing to affirm the value of human life At a time when it is critical that our children become educated more and more children are not learning the basic skills they will need to think logically so that they can begin to solve the world's problems The question may be not Can the planet survive but rather Can we humans survive and change our own destructive actions Although many scholars philosophers *The Tangle of Science* Nancy Cartwright, Jeremy Hardie, Eleonora Montuschi, Matthew Soleiman, Ann C.
