1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to determine what consumers want and are willing to pay for. Once a need is identified, the next step is to develop a concept for a product that meets this need. This is often done through brainstorming sessions with a team of designers and engineers. The concept is then refined through prototyping and testing. Once a final design is chosen, the next step is to create a business plan that outlines the costs of production, distribution, and marketing. This plan is used to secure funding from investors or banks. Finally, the product is manufactured and distributed to the market. Throughout this process, it is important to maintain communication with potential customers to ensure that the product meets their needs and expectations.

**Abstract**—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were divided into two groups: a control group and an exercise group. The exercise group performed a 10-week training program consisting of three sessions per week. The control group did not exercise. The HR and HRR were measured at rest and during maximal exercise at the beginning and end of the 10-week period. The results showed that the exercise group had a significant decrease in HR and HRR at rest and during maximal exercise compared to the control group. The control group had no significant change in HR and HRR. The results suggest that a 10-week training program can improve the cardiovascular fitness of sedentary middle-aged men.

These research activities have borne some fruit in tackling some of the challenging problems of manned and unmanned ground aerial and marine vehicles that are still open. Moreover, deep learning methods have been recently actively developed in other areas of machine learning including reinforcement training and transfer meta learning, whereas standard deep learning methods such as recent neural network RNN and coevolutionary neural networks CNN. The book is primarily meant for researchers from academia and industry who are working on in the research areas such as engineering control, engineering robotics, mechatronics, biomedical engineering, mechanical engineering and computer science. The book chapters deal with the recent research problems in the areas of reinforcement learning based control of UAVs and deep learning for unmanned aerial systems UAS. The book chapters present various techniques of deep learning for robotic applications. The book chapters contain a good literature survey with a long list of references. The book chapters are well written with a good exposition of the research problem, methodology, block diagrams and mathematical techniques. The book chapters are lucidly illustrated with numerical examples and simulations. The book chapters discuss details of applications and future research areas.

**Foundation Engineering Handbook** Hsai-Yang Fang, 2012-12-06. More than ten years have passed since the first edition was published. During that period there have been a substantial number of changes in geotechnical engineering, especially in the applications of foundation engineering. As the world population increases, more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used. Such areas include problematic soil regions, mining subsidence areas and sanitary landfills. To overcome the problems associated with these natural or man-made soil deposits

new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction
