### (Luyện tập 2)

**Exercise 1:** Có 8 lỗi sai trong đoạn văn sau đây. Tìm và sửa chúng để tạo thành một bài Writing Task 2 hoàn chỉnh.

*Some people believe that it is more important to teach children the literature and history of their own country, rather than the literature and history of other countries. To what extent do you agree or disagree?*

People have different viewing about the teaching of national versus global literature and history in schools. Personally, I support the idea that children should study first and foremost the great books and historical events of their own countries.

There are several reasons why I believe that schools should focus on teaching national literature and historical. Firstly, children enjoy learning about where they live, and by studying the ideas, culture and history of their own countries they begin to develop a sense of identify. At the same time, this approach is appealing to parents, who studied the same books and historical events and can therefore help their children with school work. English children, for example, read Shakespeare and learn about the Battle of Hastings just as their parents did, and there is educational continuity across the generations. Finally, an emphasize on national literature and history gives educators a narrower teaching scope, making curriculum design an easier task.

By contrast, the study of global events and foreign novels could cause unnecessary difficulty and confusion for school pupils. For example, I do not see the point in presenting Russian or Chinese history to a Britain child who has not yet studied the history of his or her own country in detail. Surely the child would be more able to comprehend historical events that took place in London than those that happened in Moscow or Beijing. Similarly, any exposed to international literature is likely to require the teaching of a foreign language or the use of translations. Young people at primary or secondary school age are simply not ready for such complicated.

## **Psychology Myers Unit 14 Practice Test:**

*Working with the Brain in Psychology* Lynn A. Schaefer, Hilary C. Bertisch, 2023-09-21 *Working with the Brain in Psychology* Considering Careers in Neuropsychology seeks to assist students in their career exploration by introducing them early in the contemplative stage of career planning to the fascinating speciality of psychology known as neuropsychology. The text spends considerable time differentiating neuropsychology from alternative career paths and provides personal accounts, contributions from neuropsychologists in various settings and case examples of different patient populations to illustrate what it is like to train to become and work as a neuropsychologist. This text begins by describing what neuropsychology is, how it is situated within psychology and for whom it could be a good fit. Suggestions are provided about how to engage in self-assessment in order to help choose a career. It goes on to review over a dozen similar and overlapping careers to illustrate how neuropsychology stands out. Quotes by professional neuropsychologists bring to life what a day in the life looks like in different settings and the kinds of populations with whom neuropsychologists work are illustrated with case examples. This book then outlines how one becomes a neuropsychologist, including how to re-specialize from a different field. It also gives an honest appraisal of potential challenges that come with this career and ends with anticipated future directions in the profession to look forward to. This book will be useful primarily for psychology-minded undergraduates and college graduates thinking of going on to graduate school for psychology as well as for high school students interested in the brain and psychology. This book is further aimed at those considering a change of career from a related field into neuropsychology as well as the guidance counselors and college career centers that assist with career planning. It is accompanied by a freely available eResource full of related weblinks that will be of use to students wanting further information and guidance.

*International Handbook of Cross-Cultural Neuropsychology* Barbara P. Uzzell, Marcel Ponton, Alfredo Ardila, 2007-01-05. The role of culture is significant when measuring cognitive abilities during neuropsychological assessments. However, cultural diversity is a frequently overlooked moderating variable. The *International Handbook of Cross Cultural Neuropsychology* emphasizes major distinctions among cultural groups in North and South America, Europe, Africa, Asia, and Australia. Using Psychometrics Robert Edenborough, 1999. Despite the increasing use of Psychometric Tests, there is still a great deal of misapprehension about them and indeed much scepticism about their viability. Robert Edenborough provides a detailed and practical guide to the use of tests, clearly showing how powerful and effective they can be in aiding staff selection and development. For any manager or personnel specialist considering using tests, *Using Psychometrics* illustrates how they can and should be effectively integrated with other assessment methods. Seeking to demystify psychometric testing, on the one hand, and on the other, point out the pitfalls of ill-considered use, the author shows what psychometric tests are and when and how to use them. How to understand the different types of test and what they can contribute. How to choose the most appropriate tests for specific areas of application. The legal, professional and commercial regulatory framework. For personnel HR.
