

Thinking and Intelligence

What is Thinking?

Thinking: The mental manipulation of representations of information we encounter in our environments.

- Cognitive psychologists study thought and the understanding that results from thinking

What are Mental Representations?

- **Analogical representations:** Mental representations that have some of the physical characteristics of objects
- **Symbolic representations:** Abstract mental representations that consist of words or ideas

Mental Maps include both analogical and symbolic representations

- Such shortcuts are useful, but they can sometimes lead to errors, because we can represent only a limited range of knowledge.

Schemes Are the Basis of Thinking

Schemes allow categorization of concept

- **Schemas:** Mental structures—collect ideas, prior knowledge, and experience that help organize information and thought and behavior.
- Schemes form as the result of your experiences

When we use a schema to group things based on shared properties, we create a category.

Concept: A mental representation of objects, events, or relations organized around common themes.

Exemplar model of categorization

- **Exemplar model:** A way of thinking about concepts. All concepts in a category are examples (exemplars); together, they form the category
- **Prototype model:** A way of thinking about concepts. Within each category, there is a best example—a prototype—for that category.

Stereotypes

- Schemes that allow for easy, fast processing of information about people, events, or groups, based on their membership in particular groups

Examples

- Race: Black, White, Asian
- Role: Professor, athlete, mortician
- Gender: Male, female, nonbinary

You Use Thinking in Three Ways

Reasoning: Using information to determine if a conclusion is valid or reasonable.

- Informal reasoning: relying on opinions
- Formal reasoning: relying on logical and objective methods

Biased Reasoning

- **Confirmation bias:** people show a strong tendency to pay greater attention to evidence that supports their beliefs and ignore or downplay evidence that does not
- Sullow and colleagues (2019) found that visual attention to news stories on Facebook did not vary by attitude held, but stories selected did

Psychology is of interest to academics from many fields as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology.

[Psychology Around Us](#) Ronald Comer, Elizabeth Gould, 2010-01-19. This exciting new textbook for introductory psychology helps to open students' minds to the idea that psychology is all around us. Authors RON COMER and LIZ GOULD encourage students to examine what they know about human behaviour and how they know it and open them up to an appreciation of psychology outside of the classroom. *Psychology Around Us* helps students see the big picture by stressing the interconnected nature of psychological science. Almost every chapter within this first edition helps open students' minds to comprehend the big picture with sections that highlight how the different fields of psychology are connected to each other and how they connect to everyday life. This text highlights human development, brain function, abnormal psychology, and the individual differences in each area, as cut across themes to demonstrate these connections. Also included are two-page art spreads to demonstrate exactly what happens in the brain when we engage in everyday activities such as eat pizza, study psychology, or listen to music. The art featured in these spreads have been created especially for *Psychology Around Us* by an award-winning artist with input from faculty on how it will contribute to teaching and learning.

Features Cut Across Connections Almost every chapter helps students comprehend the big picture with sections that highlight how the different fields of psychology are connected to each other and how they connect to everyday life.

What Happens in the Brain When These two-page art spreads demonstrate exactly what happens in the brain when we engage in everyday activities such as eating pizza, studying psychology, or listening to music.

Chapter Opening Vignettes Every chapter begins with a vignette that shows the power of psychology in understanding a whole range of human behaviour. This theme is reinforced throughout the chapter celebrating the extraordinary processes that make the everyday possible.

Special topics on psychology around us Each chapter highlights interesting news stories, current controversies in psychology, and relevant research findings that demonstrate psychology around us.

The Practically Speaking box emphasizes the practical application of everyday psychology.
