

Tuberculin Skin Testing

Information for Health Care Providers

What is it?

The **Mantoux tuberculin skin test (TST)** is one method of determining whether a person is infected with *Mycobacterium tuberculosis*. Reliable administration and reading of the TST requires standardization of procedures, training, supervision, and practice.

How is the TST Administered?

The TST is performed by injecting 0.1 ml of tuberculin purified protein derivative (PPD) into the inner surface of the forearm. The injection should be made with a tuberculin syringe, with the needle bevel facing upward. The TST is an intradermal injection. When placed correctly, the injection should produce a pale elevation of the skin (a wheal) 6 to 10 mm in diameter.

How is the TST Read?

The skin test reaction should be read between 48 and 72 hours after administration by a health care worker trained to read TST results. A patient who does not return within 72 hours will need to be rescheduled for another skin test.

The reaction should be measured in millimeters of the induration (firm swelling). The reader should not measure erythema (redness). The diameter of the indurated area should be measured across the forearm (perpendicular to the long axis).

How Are TST Reactions Interpreted?

Skin test interpretation depends on two factors:

- Measurement in millimeters of the induration
- Person's risk of TB infection or the risk of progression to TB disease if infected

Classification of the Tuberculin Skin Test Reaction

- An **induration of 5 or more millimeters** is considered positive in
 - People living with HIV
 - A recent contact of a person with infectious TB disease
 - People with chest x-ray findings suggestive of previous TB disease
 - People with organ transplants
 - Other immunosuppressed people (e.g., patients on prolonged therapy with corticosteroids equivalent to/greater than 15 mg per day of prednisone or those taking TNF- α antagonists)
- An **induration of 10 or more millimeters** is considered positive in
 - People born in countries where TB disease is common, including Mexico, the Philippines, Vietnam, India, China, Haiti, and Guatemala, or other countries with high rates of TB
 - People who abuse drugs
 - Mycobacteriology laboratory workers
 - People who live or work in high-risk congregate settings (e.g., nursing homes, homeless shelters, or correctional facilities)
 - People with certain medical conditions that place them at high risk for TB (e.g., silicosis, diabetes mellitus, severe kidney disease, certain types of cancer, and certain intestinal conditions)
 - People with a low body weight (<90% of ideal body weight)
 - Children younger than 5 years of age
 - Infants, children, and adolescents exposed to adults in high-risk categories
- An **induration of 15 or more millimeters** is considered positive in
 - People with no known risk factors for TB

Charlton, Thomas G. O'Brien, 2019-09-25. Like the first edition, the revision of this successful Handbook responds to the growing need for specific tools and methods for testing and evaluating human system interfaces. Indications are that the market for information on these tools and applications will continue to grow in the 21st century. One of the goals of offering a second edition is to expand and emphasize the application chapters providing contemporary examples of human factors test and evaluation HFTE enterprises across a range of systems and environments. Coverage of the standard tools and techniques used in HFTE have been updated as well. New features of the Handbook of Human Factors Testing and Evaluation include new chapters covering human performance testing, manufacturing ergonomics, anthropometry, generative design, methods and usability testing, updated tools and techniques for modeling simulation, embedded testing, training, assessment and psychophysiological measurement, new applications chapters presenting human factors testing examples in aviation and avionics, forestry, road safety and software systems, and more examples, illustrations, graphics and tables have been added. The orientation of the current work has been toward breadth of coverage rather than in-depth treatment of a few issues or techniques. Experienced testers will find much that is familiar as well as new tools, creative approaches and a rekindled enthusiasm. Newcomers will discover the diversity of issues, methods and creative approaches that make up the field. In addition, the book is written in such a way that individuals outside the profession should learn the intrinsic value and pleasure in ensuring safe, efficient and effective operation as well as increased user satisfaction through HFTE. *WHO operational handbook on tuberculosis. This handbook can also help countries adequately plan for the uptake of interventions to better address the specific needs of children and adolescents with or at risk of TB. It can contribute to national efforts to build capacity among national and subnational programme managers and among health workers at all levels of the health care system. The target audience for this handbook includes NTPs and other child health programmes that provide care for children with or at risk of TB, including maternal, newborn, child and adolescent health programmes, HIV services and PHC programmes. The handbook also targets paediatricians and other health care workers, HCWs in the public and private sectors, school health services, civil society and community-based organizations and health care educators. Maternal-Fetal Evidence-Based Guidelines

It presents the reader with the right information in the right format by summarizing evidence in easy to use tables and algorithms. Plenty of evidence is available so that well informed clinicians can reduce errors so that the first aim is ultimately to improve the health of mother and fetus by providing quality care. **Technical Report**, 1987 MYCDCGP - Clinical Practice Guidelines Management of Tuberculosis (4th Edition) Bahagian Kawalan Penyakit, Kementerian Kesihatan Malaysia, *Handbook of Global Tuberculosis Control* Yichen Lu, Lixia Wang, Hongjin Duanmu, Chris Chanyasulkit, Amie J. Case studies from China, Pakistan, Nigeria, Indonesia and other frontline countries demonstrate a wealth of information on clinical, cultural, socioeconomic and other relevant factors. This compilation provides a valuable resource for creating successful intervention and prevention strategies. State of the science snapshots pinpoint where short and long term initiatives stand today from early detection and vaccination programs to new genetic technologies and drug therapies. This diverse group of perspectives and approaches offers innovative paths toward control and realistic odds for containing the threat especially in the face of current co epidemics and new drug resistant strains. Among the topics in the Handbook: Diagnosis of tuberculosis current pipeline unmet needs and new developments; Concurrence of tuberculosis and other major diseases; The tuberculosis outbreak response investigation and control; The promise of new TB vaccines; DNA fingerprinting of *Mycobacterium tuberculosis*; a rich source of fundamental and daily applicable knowledge; Global tuberculosis surveillance. Forbes, 2008-12-16 The aim of this book is to provide firstly an introduction to probability and statistics especially directed to the metrology and testing elds and secondly a comprehensive newer set of modelling methods for data and uncertainty

analysis that are generally not considered yet within mainstream methods The book brings for the first time a coherent account of these newer methods and their computational implementation They are potentially important because they address problems in applications where the usual hypotheses that are at the basis of most of the traditional statistical and probabilistic methods for example relating to normality of the probability distributions are frequently not fulfilled to such an extent that an accurate treatment of the calibration or test data using standard approaches is not possible Additionally the methods can represent alternative ways of data analysis allowing a deeper understanding of complex situations in measurement The book lends itself as a possible textbook for undergraduate or postgraduate study in an area where existing texts focus mainly on the most common and well known methods that do not encompass modern approaches to calibration and testing problems The book is structured in such a way to guide readers with only a general interest in measurement issues through a series of review papers from an initial introduction to modelling principles in metrology and testing to the basic principles of probability in metrology and statistical approaches to uncertainty assessment
